

Content Studio

The complete enterprise guide to creating, editing, previewing, and publishing courses — with and without AI.

PRODUCT MANUAL · VERSION 1.0
For first-time users · Non-technical audience
Prepared for Enterprise Clients

01

Product Overview

Content Studio is an enterprise course authoring platform that helps teams create rich, multi-page learning experiences in minutes. It combines a familiar block-based editor with AI assistance, blueprint-driven structure, and instant preview across devices — so course creators can move from a blank page to a publish-ready course without writing a single line of code.

What you can do with Content Studio

- Author courses manually with AI assistance at every step.
- Generate a complete course from a topic, document, or outline using AI.
- Organize content into Sections, Chapters, and Pages with drag-and-drop.
- Add text, image, video, audio, file, question, and quiz blocks.
- Preview courses in Multi-Page or Single-Page layouts on desktop, tablet, and mobile.
- Export to SCORM 2004, PDF, MS Word, PPT, or HTML.
- Use Course Blueprints to standardize structure across your library.

NOTE — Who this manual is for

This guide is written for first-time, non-technical users. No prior experience with authoring tools or AI products is required.

03

Getting Started

Signing in

Open the Content Studio URL provided by your administrator. You will land on the sign-in screen.

Field	Required	Description	Example
Email / Username	Yes	Your organization-issued account.	jane.doe@acme.com
Password	Yes	Confidential password set by you or your admin.	••••••
Remember me	No	Keeps you signed in on this device.	Toggle on/off

Figure — Sign-in screen with email, password, and Sign In button
<https://coursed.lovable.app/auth>

TIP — First-time login

Use the “Forgot password?” link if you do not yet have credentials. A reset email is sent to your registered address.

04 Dashboard Overview

The Dashboard is the home screen after sign-in. It shows your courses, lets you start new ones, and provides quick access to AI-powered creation flows.

Layout

- **Top bar** — branding, token balance, account menu, and help.
- **Primary actions** — “Create New Course” and “Generate with AI”.
- **Course grid** — recent courses with status chips (Draft, Published, In Review).
- **Filters** — search, sort, and filter by status or owner.

Figure — Dashboard with welcome banner, Quick Start, and course grid
<https://coursed.lovable.app/dashboard>

Primary buttons

Button	Action	When to use
Create New Course	Opens the Create Course dialog (title + layout + AI options).	When starting a fresh course manually.
Generate with AI	Launches the AI Generate Course wizard.	When you want AI to draft the full course.
Open Blueprints	Navigates to the Course Blueprint library.	When you want a reusable structure.
Token meter	Shows AI tokens available and recent usage.	Click to view consumption details.

BEST PRACTICE — Start with a goal

Before clicking Create, write your learning outcome in one sentence. Clear outcomes lead to better AI suggestions and tighter content.

05

Course Creation Workflows

Content Studio supports two primary workflows. Choose the one that matches your starting point.

Workflow	When to choose it	Output
Manual + AI Assist	You have a clear outline and want full control.	Hand-crafted course with AI help on demand.
Fully AI-Generated	You have a topic or document and want speed.	Complete draft course you then refine.

06

Manual Course Creation with AI Assistance

Step-by-step

Step 1 — Open the Create Course dialog

From the Dashboard click **Create New Course**. Enter a course title, choose a layout (*Multi-Page* or *Single-Page*), and configure optional AI options (Guidelines and Exclusions).

Step 2 — Set Guidelines and Exclusions

Click the **(i)** icon next to each section to view examples. Guidelines describe tone, depth, and audience. Exclusions list topics or phrasings the AI should avoid.

Step 3 — Create the course

Click **Create**. You are taken to the editor with an empty outline panel on the left and the canvas on the right.

Step 4 — Add Sections

Use **+ Add Section** to create top-level units. Each section can hold multiple chapters/pages.

Step 5 — Add Pages or Chapters

Inside a section, click **+ Add Page**. Drag to reorder. Right-click for the **More Options** menu (rename, duplicate, delete).

Step 6 — Add Content Blocks

Inside a page, click **+** to insert Text, Image, Video, Audio, File, Question, or Quiz blocks.

Step 7 — Use the AI Support panel

Open the **AI** button in the header. Ask AI to draft text, rewrite, summarize, generate questions, or suggest images for the current block.

Step 8 — Preview

Click **Preview** to launch the device-aware preview. Verify navigation, media playback, and quiz behavior.

Step 9 — Save and Publish

Click **Save** regularly. When ready, use **Export** to publish to SCORM, PDF, MS Word, PPT, or HTML.

TIP — Work block-by-block

Finish one content block before adding the next. It keeps AI suggestions focused and avoids large undo stacks.

07

Fully AI-Generated Course Creation

The AI Generate Course wizard creates a complete draft in four guided steps.

Step 1 — Course Intent

Enter a course title, upload source files (PDF, DOCX, PPTX, TXT) if any, and choose a layout. The autocomplete suggests trending titles as you type.

Step 2 — Course Details

Select target audience (Children, Teenager, Young, Senior, etc.), education level, region, and duration. Use the chips to make quick selections.

Step 3 — Learning Preferences

Define learning objectives, Bloom's taxonomy emphasis (Remember, Understand, Apply, Analyze, Evaluate, Create), and content style. Add Guidelines and Exclusions.

Step 4 — Review Structure

AI presents the proposed course hierarchy as an editable tree. Add, rename, reorder, or remove sections and pages before generation.

Generate

Click **Generate Course**. A progress dialog shows AI drafting each section. On completion you are redirected to the Multi-Page editor with the draft loaded.

Figure — AI Generate Course wizard — Step 1, Course Intent
<https://coursed.lovable.app/ai-generate-course>

WARNING — Review before publishing

AI drafts are starting points. Always read every page, check facts, and confirm tone before sharing with learners.

08 Multi-Page Course Editor (/create-course-multipage)

Purpose

Author courses where each page is its own learning unit. Best for structured, navigable curricula.

Layout

- **Left panel** — Outline with Sections and Pages, drag-to-reorder.
- **Center canvas** — Block editor for the active page.
- **Header** — Layout selector, AI Support, Preview, Export, Save.
- **Block toolbar** — Appears above any focused text block.

Figure — Multi-Page editor — outline panel, content blocks, header tools
<https://coursed.lovable.app/edit-course/{courseId}>

Key actions

Action	How	Outcome
Add Section	Click + Add Section in outline.	New collapsible group appears.
Add Page	Inside a section, click + Add Page .	Empty page opens in canvas.
Reorder	Drag the handle on outline items.	Items snap to the drop position.
More Options	Right-click an item or use the options menu.	Rename, Duplicate, Delete.
Switch layout	Use the Layout dropdown in the header.	Course converts to Single-Page; content is preserved.

09

Single-Page Course Editor (/create-course-singlepage)

The Single-Page editor places every section and page in one continuously scrolling document. A sidebar rail tracks your position and lets learners jump to any item.

When to use

- Short courses or one-pager study guides.
- Reference documents where learners scan rather than navigate.
- Pre-reads and policy summaries.

Figure — Editor canvas — Single-Page layout uses the same tools as Multi-Page
<https://coursed.lovable.app/create-course-singlepage>

NOTE — Switching layouts is non-destructive

You can move between Multi-Page and Single-Page at any time using the Layout dropdown — your content, images, and quizzes are preserved.

10

Course Edit Workspace (/edit-course/{id})

Open any existing course from the Dashboard to enter the Edit Course workspace. This is the home base for ongoing edits, AI regeneration, image management, and metrics review.

Primary panels

- **Overview** — Title, description, course image, introduction.
- **Chapters** — Accordion of sections; each section expands to its chapters/pages.
- **Metrics** — Bloom's taxonomy distribution per section (Knowledge, Understand, Application, Total).
- **Token Consumption** — AI usage by operation.
- **Danger zone** — Clone, Delete.

Figure — Edit Course workspace — outline, content blocks, and AI Support trigger
<https://coursed.lovable.app/edit-course/{courseId}>

Dialog	Purpose
Edit Overview	Update title, description, audience.
Edit Chapter	Rename, change Bloom's level, adjust inclusions/exclusions.
Generate Chapter	Re-run AI on a single chapter.
Generate Quiz	Add SCQ/MCQ/True-False/FIB questions to a chapter.
Modify Structure	Bulk add, reorder, or remove chapters.
Image Dialog	Upload or AI-generate a chapter image.
Introduction	Edit the course intro shown to learners.
SCORM Preferences	Configure SCORM packaging options.
Token Consumption	Inspect input/output token spend.
Clone / Delete	Duplicate or remove the course.

11

Section & Page Management

Courses are organized in a three-level hierarchy: **Course** → **Section** → **Page**. Sections behave like accordions; pages live inside sections and contain the actual content blocks.

Common operations

Operation	Where	Notes
Add Section	Outline panel · + Add Section	Sections appear at the bottom; drag to reorder.
Add Page	Inside a section · + Add Page	Pages inherit section settings by default.
Rename	Double-click the title or use options → Rename	Press Enter to commit.
Duplicate	options → Duplicate	Creates a copy directly below the original.
Delete	options → Delete	Confirmation required; cannot be undone after Save.
Reorder	Drag the handle	Native HTML5 drag-and-drop; works across sections.

Bloom's taxonomy indicators

Each section displays a small metrics strip with counts per Bloom level (Knowledge, Understand, Application, Total). Use this to keep cognitive demand balanced across the course.

BEST PRACTICE — Plan structure first

Decide your sections and page titles before adding content. A clear skeleton makes AI suggestions sharper and reduces rework.

12

Content Blocks

Every page is built from blocks. Click the + button on a page to insert any of the following.

Block	Purpose	Key actions
Text	Paragraphs, headings, lists, quotes.	Rich text toolbar, AI rewrite, format, link.
Image	Static visuals.	Upload, AI generate, resize, alt text.
Image + Description	Image with side caption.	Two-column layout; independent text.
Video	Embedded video.	Upload or URL; poster image.
Video + Description	Video with side caption.	Two-column layout.
Audio	Voice or music clip.	Upload, transcript field.
Doc / File	Downloadable resource.	PDF, DOCX, XLSX, ZIP up to allowed size.
Question	Single SCQ/MCQ/T-F/FIB.	Inline answer editor with explanations.
Quiz	Group of questions.	Open the Quiz Dialog to manage as a set.
Multicolumn	2- or 3-column layout block.	Holds nested blocks.

Figure — Content blocks inside a page with AI sparkles and + add controls
<https://coursed.lovable.app/edit-course/{courseId}>

Block-level AI

- **Generate** — Draft content based on the page title and surrounding context.
- **Improve** — Tighten language, fix grammar, adjust reading level.
- **Summarize** — Condense long passages.
- **Translate** — Convert to a supported language.
- **Suggest image** — Propose AI-generated visuals for the block.

WARNING — File size limits

Image uploads up to 10 MB. Video up to 200 MB. Documents up to 25 MB. Larger files should be hosted externally and linked.

13 Toolbar & Rich Text Editor

The rich text toolbar appears above any focused text block. It offers a comprehensive set of formatting controls.

Group	Controls
Text style	Bold, Italic, Underline, Strikethrough, Subscript, Superscript
Headings	H1, H2, H3, Paragraph, Quote
Lists	Bulleted, Numbered, Checklist
Color	Text color, Background color (highlight)
Alignment	Left, Center, Right, Justify
Insert	Link, Image, Table (grid picker), Horizontal rule
Font	Family and size selectors
History	Undo, Redo
AI	Sparkles menu — Generate, Improve, Summarize, Translate

The screenshot displays the CourseD Lovable app interface. At the top, a navigation bar includes a back arrow, the course title 'Carbon Accounting-ACCA', a 'Multi-page layout' toggle, and various editing tools (font, color, link, image, table, horizontal rule) along with an 'Export' button. The main content area is divided into two columns. The left column features a large heading 'Carbon' with a sub-header '22/ 275'. Below this is a 'Welcome to the Course' section with a paragraph of text and an image of hands pointing at a laptop screen. The right column shows a 'COURSE OUTLINE' section with a '+ Add item' button. The outline lists '01 Introduction & Overview' with an 'Open >' button. Below this, there are two sub-items: 'Course Welcome' and 'Learning Objectives', each with an 'Open >' button. At the bottom of the outline, there is a '+ Add page' button.

Figure — Rich text editing happens inline on every text block
<https://coursed.lovable.app/edit-course/{courseId}>

Keyboard shortcuts

Action	Windows / Linux	macOS
Bold	Ctrl + B	■ + B
Italic	Ctrl + I	■ + I
Underline	Ctrl + U	■ + U
Link	Ctrl + K	■ + K
Undo	Ctrl + Z	■ + Z
Redo	Ctrl + Shift + Z	■ + Shift + Z
Save	Ctrl + S	■ + S

14 AI Features

AI runs throughout Content Studio — at the course level, blueprint level, page level, and block level. All AI actions consume tokens shown in the header.

Feature	Where	What it does	Best for
AI Course Generation	AI Generate Course wizard	Builds full course from intent + sources.	Fast first drafts.
AI Outline Suggestions	Wizard · Step 4	Proposes sections and pages.	Brainstorming structure.
AI Block Drafting	Block + → AI	Writes a content block from context.	Filling skeleton pages.
AI Rewrite / Improve	Block toolbar · Sparkles	Refines tone, clarity, grammar.	Polishing drafts.
AI Question Generation	Quiz Dialog	Creates SCQ/MCQ/T-F/FIB sets.	Building assessments.
AI Image Generation	Image block · Generate	Produces images from a prompt.	Visualizing concepts.
AI Blueprint Parsing	Course Blueprint · Import	Reads uploaded outlines and structures them.	Migrating outlines.
Bloom's Mapping	Wizard & Edit Chapter	Tags content with cognitive levels.	Balanced learning design.

TIP — Guidelines & Exclusions

Use the (i) icons on the Create Course dialog and AI Support panel to view example phrasings. Strong guidelines produce dramatically better AI output.

15 Course Blueprint & Import Outline

Purpose

A Course Blueprint is a reusable course skeleton: a structured set of sections and chapters with optional AI configurations. Use blueprints to standardize how courses are organized across teams and programs.

Opening Blueprints

- From the Dashboard, open the **Blueprints** entry in the navigation.
- The Blueprints list shows title, status, type, levels, and last updated date.
- Click any blueprint to enter the **Blueprint Editor**.

Import Course Outline

Use Import Course Outline to convert an existing document (PDF, DOCX, TXT) into a structured blueprint. AI parses the file, detects headings, and proposes a Section → Chapter hierarchy.

Step	Action	What happens
1	Open Blueprints → Create Blueprint → Import Outline	Upload dialog appears.
2	Drop a file or browse (PDF, DOCX, TXT)	File is validated and queued.
3	AI parses the document	Headings and bullets become Sections and Chapters.
4	Review the generated structure	Edit titles, reorder, add/remove nodes.
5	Save Blueprint	Blueprint becomes available to create courses from.

Figure — Blueprints list with totals, search, and Create Blueprint
<https://coursed.lovable.app/blueprints>

Blueprint visual structure

- Accordion sections** with expandable/collapsible chapters.
- Bloom’s taxonomy indicators** per section.
- Progress states** — Draft, In Review, Ready, Failed.

- **Import success/error banners** show parsing results.

BEST PRACTICE — Reuse, don't recreate

Once a blueprint matches your house style, lock it as a template. Future courses inherit consistent structure and metadata.

16 Preview Workflows

Preview shows your course as a learner would see it. Two preview routes exist, one per layout.

Route	Layout	Behavior
/multipage-preview	Multi-Page	Paged navigation with Next/Previous and a sidebar table of contents.
/singlepage-preview	Single-Page	Continuous scroll with an active-item rail.

Device emulators

- **Desktop** — full width, default.
- **Tablet** — 820–1024 px viewport.
- **Mobile** — 375–414 px viewport with touch interactions.

Readiness checks

- All images load and have alt text.
- Videos and audio play to completion.
- Quiz answers and explanations are correct.
- Navigation between pages works in both directions.

Figure — Preview mode with device emulators (mobile/tablet/desktop) and Export
<https://coursed.lovable.app/course-preview/{courseId}>

17 Export Options

Click **Export** from the editor or Edit Course workspace to open the Export dialog.

Format	Use case
SCORM 2004	Upload to a Learning Management System (LMS).
PDF	Printable handouts and offline reading.
MS Word	Editable manuscripts for review.
PPT	Presentation decks — pick a visual template.
HTML	Self-hosted web bundles.

PPT templates

- Artistic Essence — warm coral/pink, expressive.
- Visionary Design — amber, energetic.
- Minimalist Magic — neutral, editorial.
- Whitespace Wonders — green, calm and clean.

NOTE — SCORM packaging

Configure SCORM preferences in the Edit Course workspace before exporting. The export bundles a manifest, resources, and tracking metadata.

18 Publishing Workflow

1. Finalize content

Complete all pages, run AI Improve on weak text, and verify media.

2. Run Preview

Open both Multi-Page and Single-Page previews; test on all device sizes.

3. Set metadata

Update title, description, audience, and cover image in Edit Course → Overview.

4. Configure SCORM (if LMS)

Open SCORM Preferences and set completion criteria.

5. Export

Choose the target format; download the generated file.

6. Distribute

Upload to your LMS, intranet, or share the file directly.

19 Best Practices

- Write one clear learning outcome per page.

- Keep paragraphs under five sentences; use lists for steps.
- Pair every concept block with a question or short check.
- Use Guidelines and Exclusions consistently for AI quality.
- Save frequently; rely on Preview before exporting.
- Reuse blueprints to lock in house style.
- Tag chapters with Bloom's levels to balance cognitive load.

20

Troubleshooting

Symptom	Likely cause	Resolution
AI generation fails	Insufficient tokens or rate limit.	Check token meter; retry; contact admin.
Upload rejected	File exceeds size limit or wrong type.	Compress or use a supported format.
Preview is blank	Page has no blocks.	Add at least one content block.
Drag-and-drop doesn't work	Browser blocked drag events.	Refresh the tab; try Chrome or Edge.
Export shows old content	Save was skipped.	Click Save, then re-open Export.
Quiz dialog won't open	Block lost focus.	Click the block once, then open Quiz.
Dialog hidden behind drawer	Z-index conflict (legacy).	Update to latest build.

21

FAQs

Q. Do I need to know how to code?

A. No. Content Studio is fully no-code.

Q. Can I switch layouts later?

A. Yes. Use the Layout dropdown; content is preserved.

Q. Where are my courses stored?

A. In your organization's Content Studio workspace.

Q. Can multiple people edit at once?

A. Editing is single-user per course. Avoid simultaneous edits.

Q. How are AI tokens billed?

A. Tokens are consumed per AI action. Check the header meter.

Q. Can I export to SCORM 1.2?

A. Currently SCORM 2004 is supported.

Q. How do I reset a course?

A. Use Clone to preserve the original, then edit the copy.

22

Glossary

Term	Plain-English meaning
Block	A single piece of content on a page (text, image, video, etc.).
Blueprint	A reusable skeleton for new courses.
Bloom's Taxonomy	A way to classify learning by cognitive depth.
Chapter	Another name for a page inside a section.
Layout	Multi-Page (one unit per page) or Single-Page (one scroll).
LMS	Learning Management System — where SCORM packages run.
Outline	The Sections + Pages structure of a course.
Preview	A learner-eye view of the course before publishing.
Prompt	Text you give to AI describing what you want.
SCORM	Industry standard package format for e-learning.
Section	A top-level group that contains pages.
Token	Unit of AI usage; visible in the header meter.

A dedicated Help Center is available online. Use the link below to access guides, this manual, and contact options at any time.

Online Help Center
