17. Content Block — Quiz
18. AI Support Panel
19. Course Preview
20. Exporting a Course
21. SCORM Preferences
22. Help Center & Support

1. Welcome to Content Studio

Content Studio is an enterprise authoring platform that helps instructional designers, trainers, and subject-matter experts build professional learning content in minutes. With AI-assisted authoring, rich content blocks, blueprints, and one-click export to SCORM, PDF, PowerPoint, HTML, and Word, you can ship polished courses without leaving the tool.

Who this manual is for

First-time, non-technical users who want a complete, step-by-step walkthrough of every feature. No prior training experience is required — each section is written to stand alone.

2. Sign-In & Getting Started

Open the sign-in screen, enter your Login ID and password, and click **Sign in**. If you don't have an account, use the **Sign up** link below the form.

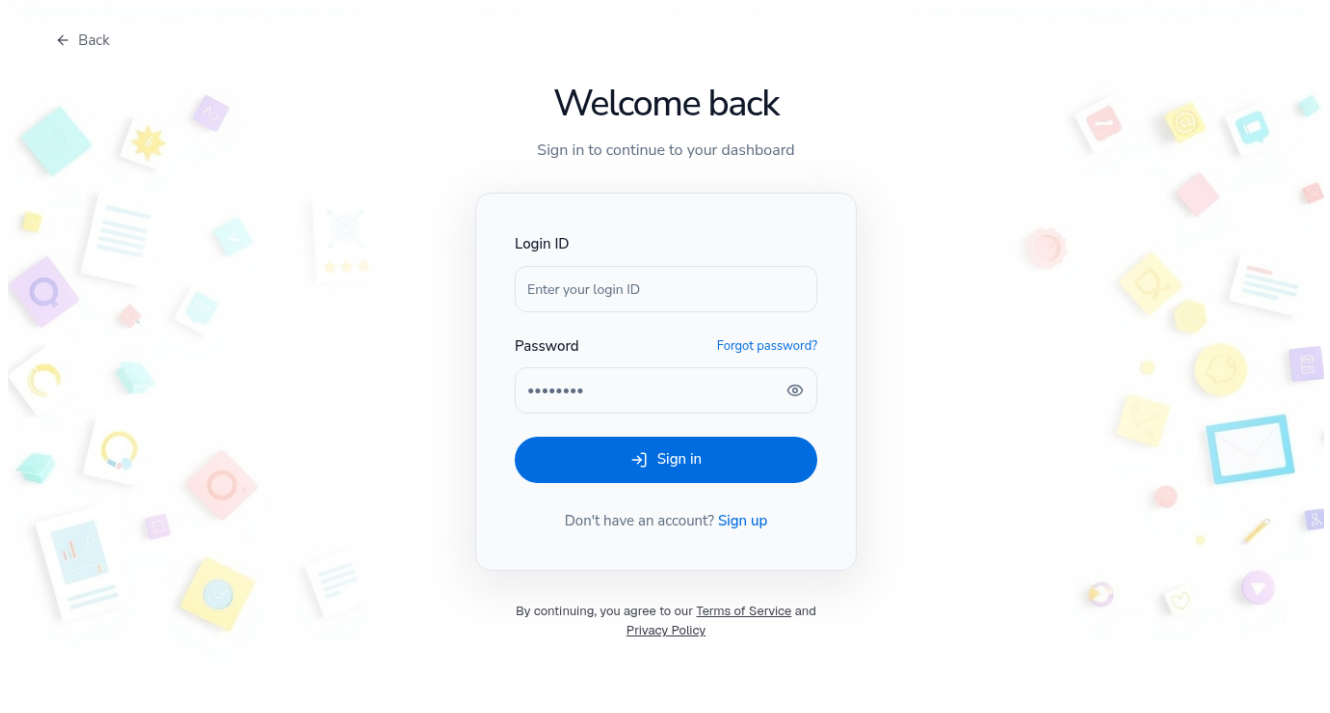

A mockup of a web sign-in interface. At the top left is a back arrow and the text 'Back'. The main heading is 'Welcome back' in a large, bold font, followed by the subtext 'Sign in to continue to your dashboard'. The central form has two input fields: 'Login ID' with a placeholder 'Enter your login ID' and 'Password' with a masked password '*****' and a toggle eye icon. A blue button with a right arrow and the text 'Sign in' is positioned below the fields. To the right of the password field is a link 'Forgot password?'. Below the button is a link 'Don't have an account? Sign up'. At the bottom, a small line of text states 'By continuing, you agree to our Terms of Service and Privacy Policy'. The entire form is surrounded by a decorative border of various colorful icons representing different digital marketing and business concepts.

Figure — Sign-in screen — enter Login ID & password to continue

3. Dashboard Overview

After signing in, the dashboard becomes your home base. From here you can create new courses, search existing ones, monitor your monthly creation activity, and access the Help Center.

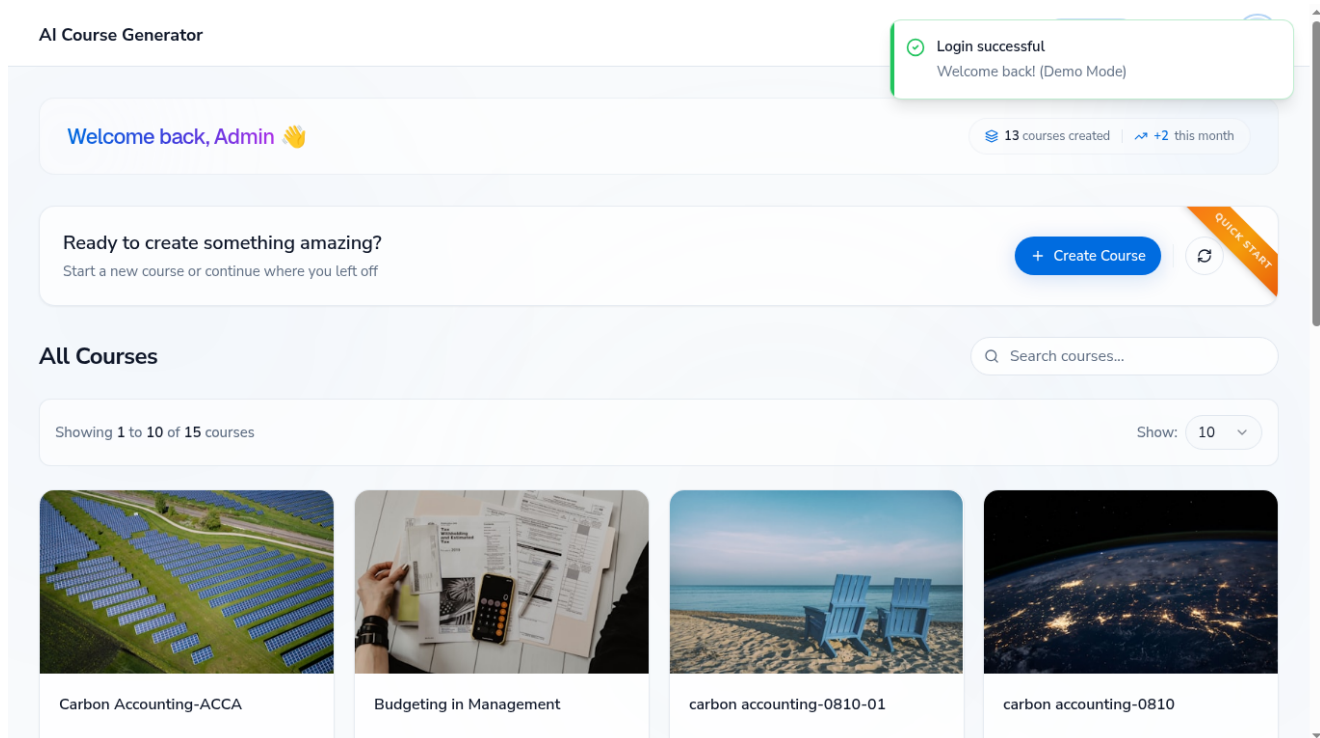

Figure — Dashboard — welcome banner, Create Course CTA, and all courses grid

Key elements

- **Welcome banner** — quick stats: total courses and new ones this month.
- **Create Course** — primary call-to-action to start a new course.
- **All Courses** — searchable grid of every course you own.
- **Tokens** — usage meter for AI-powered features.
- **Help** — opens the in-app Help Center.

4. Creating a Course — Layout Selection

Clicking **Create Course** opens a single, focused dialog where you give your course a title and choose its layout. There are two supported layouts — Multi-page or Single-page — and you can enable AI Support and SCORM Preferences right here.

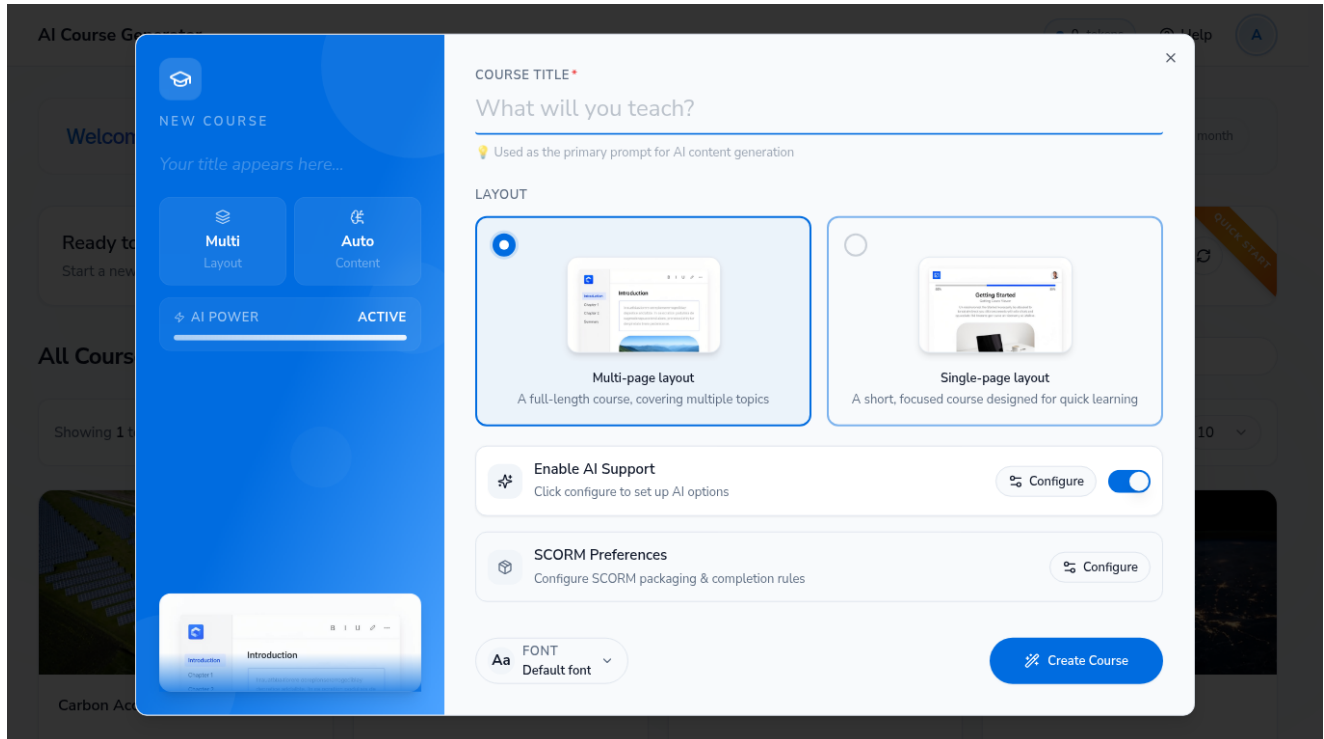

Figure — Create Course dialog — title, layout, AI Support, SCORM, Font

Layouts at a glance

- **Multi-page layout** — full-length course with chapters and pages, ideal for in-depth training.
- **Single-page layout** — short, scrolling course for quick, focused learning.

5. Step-by-Step Creation — Multi-page Layout

The Multi-page editor opens with the course title on the left and the outline on the right. Each chapter contains pages; each page holds your content blocks.

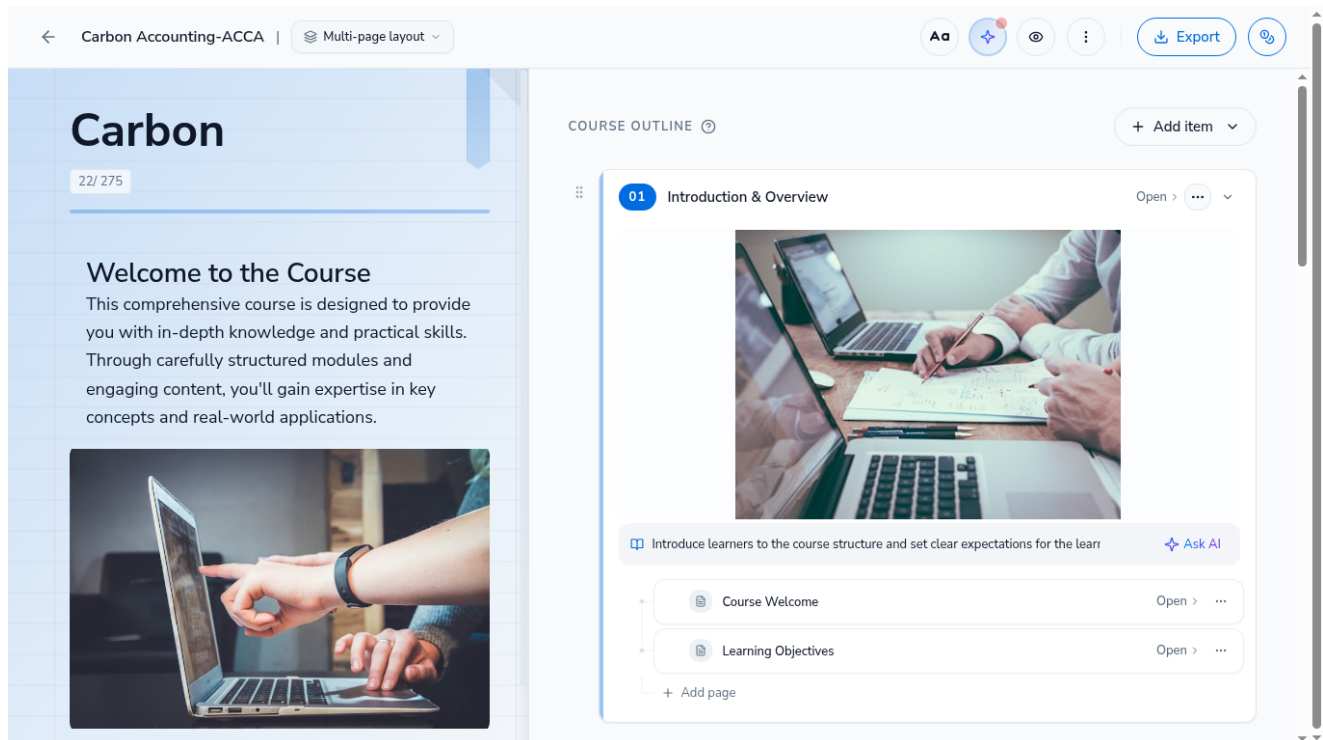

Figure — Multi-page editor — course title, intro, and course outline

Click **Add item** to add a chapter or page. Click any page to open it in the Page Editor (covered in Section 8).

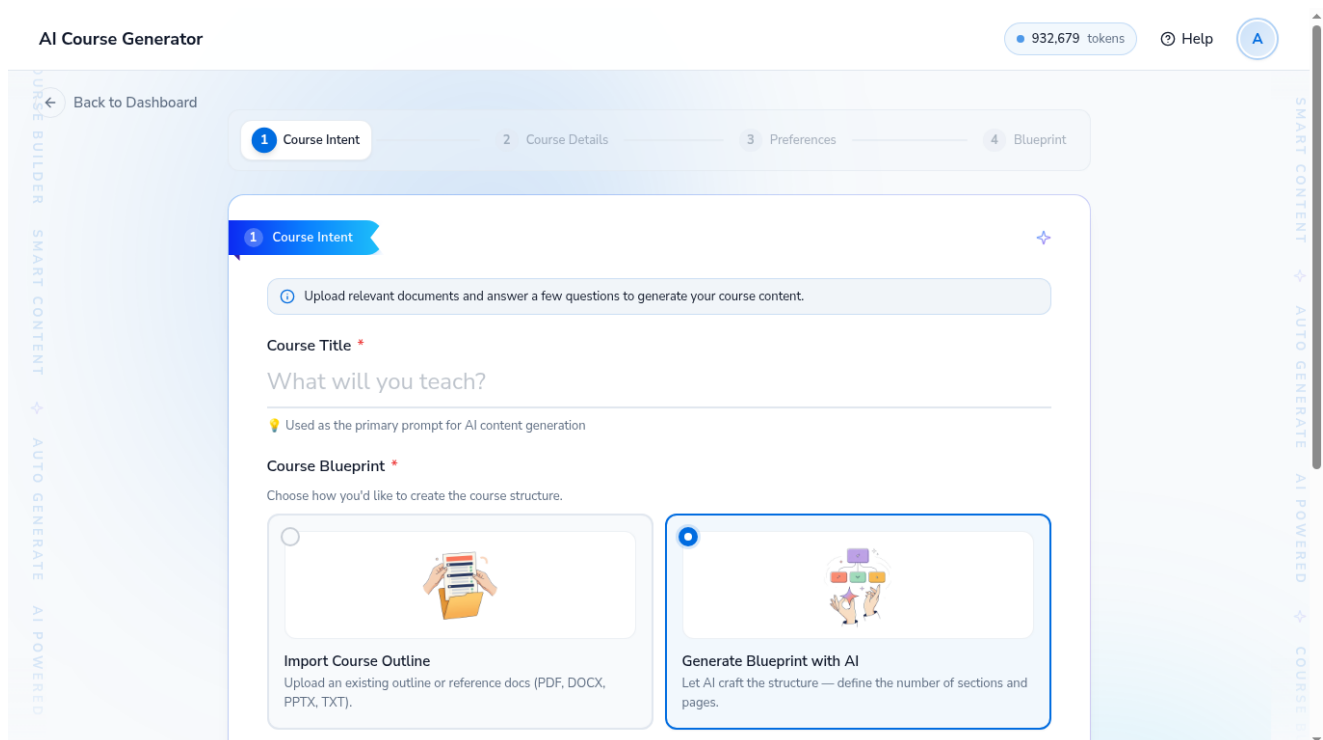

Figure — Chapter view — chapter image, intro text, and learning objectives

6. Step-by-Step Creation — Single-page Layout

The Single-page editor is a continuous, scrollable canvas — perfect for short refreshers, micro-courses, and product walkthroughs. The left sidebar lists every section and page; the right side is the live canvas you scroll through.

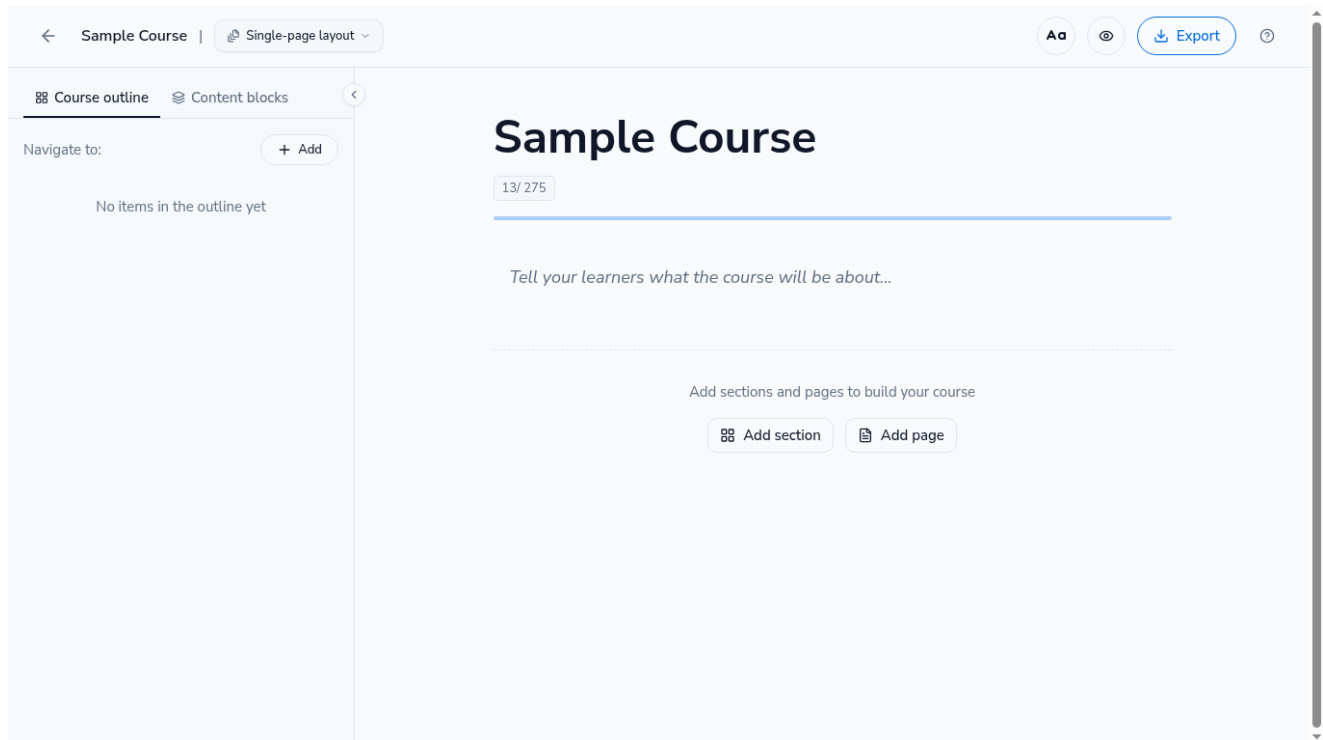

Figure — Single-page editor — empty canvas with Add section and Add page buttons

Click **Add section** to drop in your first section. You'll see the section heading, an optional section image, and an inline description placeholder.

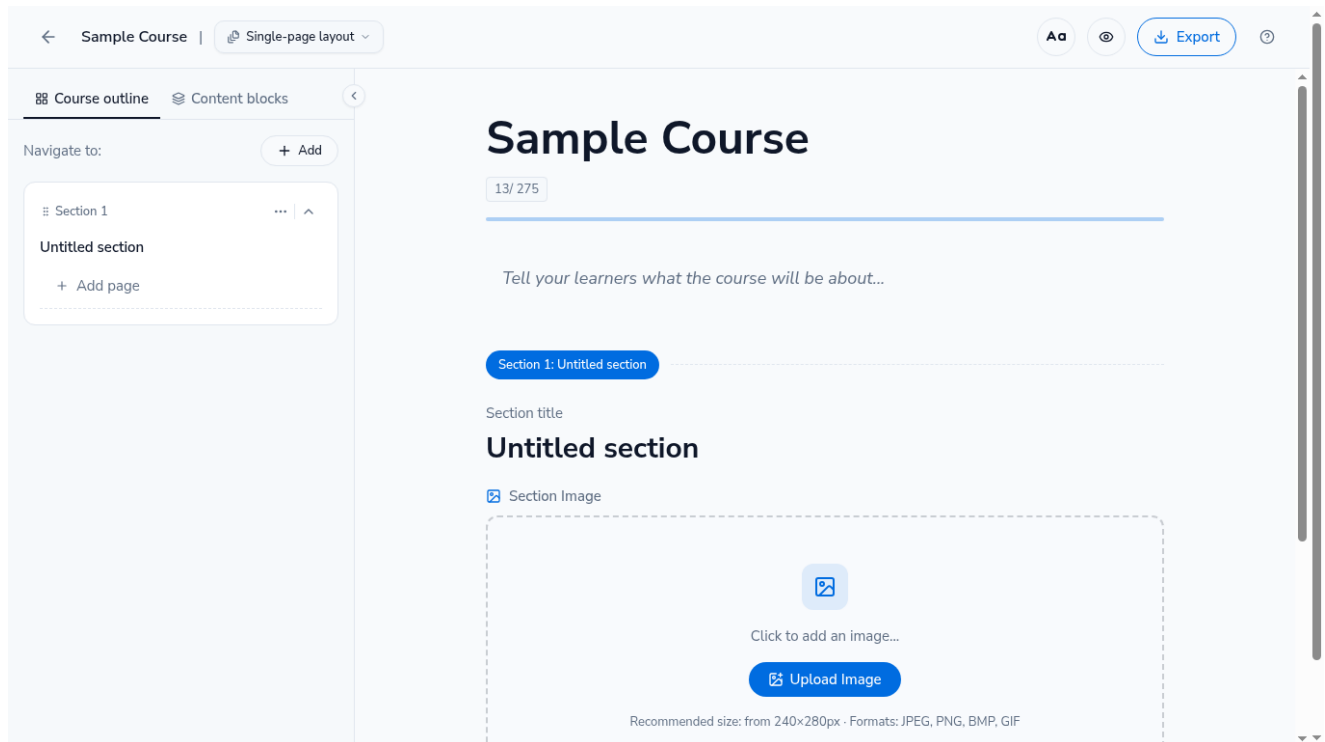

Figure — Single-page editor — first section added with section image upload

Single-page workflow steps

- 1. Add a section using the **Add section** button or the left sidebar.
- 2. Give the section a title and (optionally) upload a section image.
- 3. Add pages inside the section — each page becomes a scroll anchor.
- 4. Switch to the **Content blocks** tab to drag in content.
- 5. Use the layout dropdown at the top to flip back to Multi-page anytime.

7. Course Blueprint — Import Course Outline

Course Blueprints define the structure of a course before any content is generated. You can either upload an existing outline or have AI generate one for you.

The screenshot shows the 'AI Course Generator' interface. At the top, there's a header with 'AI Course Generator', a token count of '932,679 tokens', a 'Help' button, and a user profile icon 'A'. Below the header is a breadcrumb trail: 'Dashboard > Create Course'. The main form has two tabs: 'Details' (active) and 'Preferences'. The 'Details' tab contains two sections. The first section, 'Course Title: *', has a subtext 'Give your course a descriptive name' and a text input field with the placeholder 'Enter course title'. The second section, 'Define Course Structure: *', has a subtext 'Choose how you want to define your course structure'. It features a radio button selection for 'Blueprint' and a dropdown menu labeled 'Select Blueprint' with the option 'Budgeting in Management' selected.

Figure — Course Blueprint — Import Course Outline and Generate Blueprint with AI

Two ways to start a blueprint

- **Import Course Outline** — upload an existing outline as DOCX, PDF, PPTX, or TXT. Content Studio parses your headings into sections and pages automatically.
- **Generate Blueprint with AI** — let AI build the structure based on the number of sections and pages you choose.

AI Assist — When you upload an outline, AI automatically detects sections, pages, and learning objectives, then maps them into the editor so you can refine instead of starting from scratch.

8. The Page Editor

Opening any page launches the Page Editor — a full-screen workspace with the page outline on the left and the canvas on the right. The floating block toolbar at the bottom lets you add content blocks with one click.

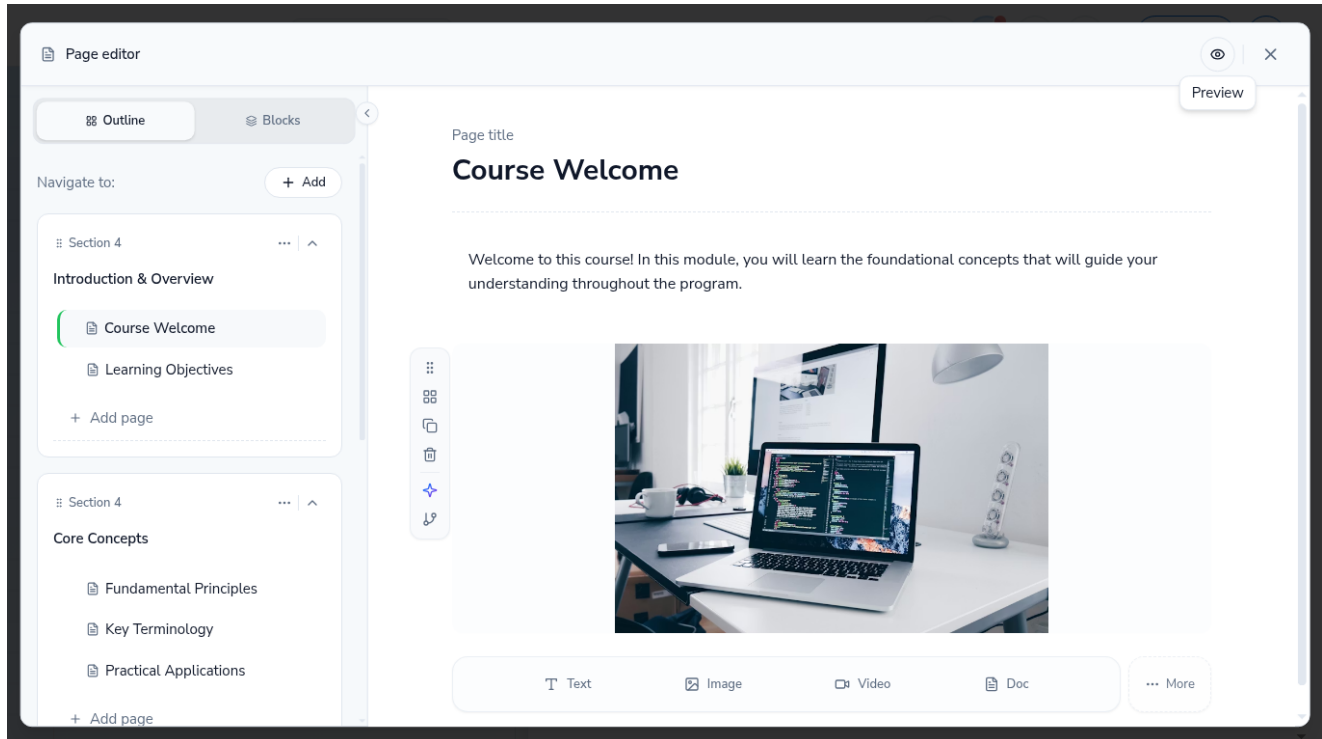

Figure — Page editor — outline sidebar, canvas, and floating block toolbar (Text, Image, Video, Doc, More)

Use the **Outline** tab to navigate between pages, and the **Blocks** tab to browse the full block library (layouts, text, images, video, audio, document, question, and quiz).

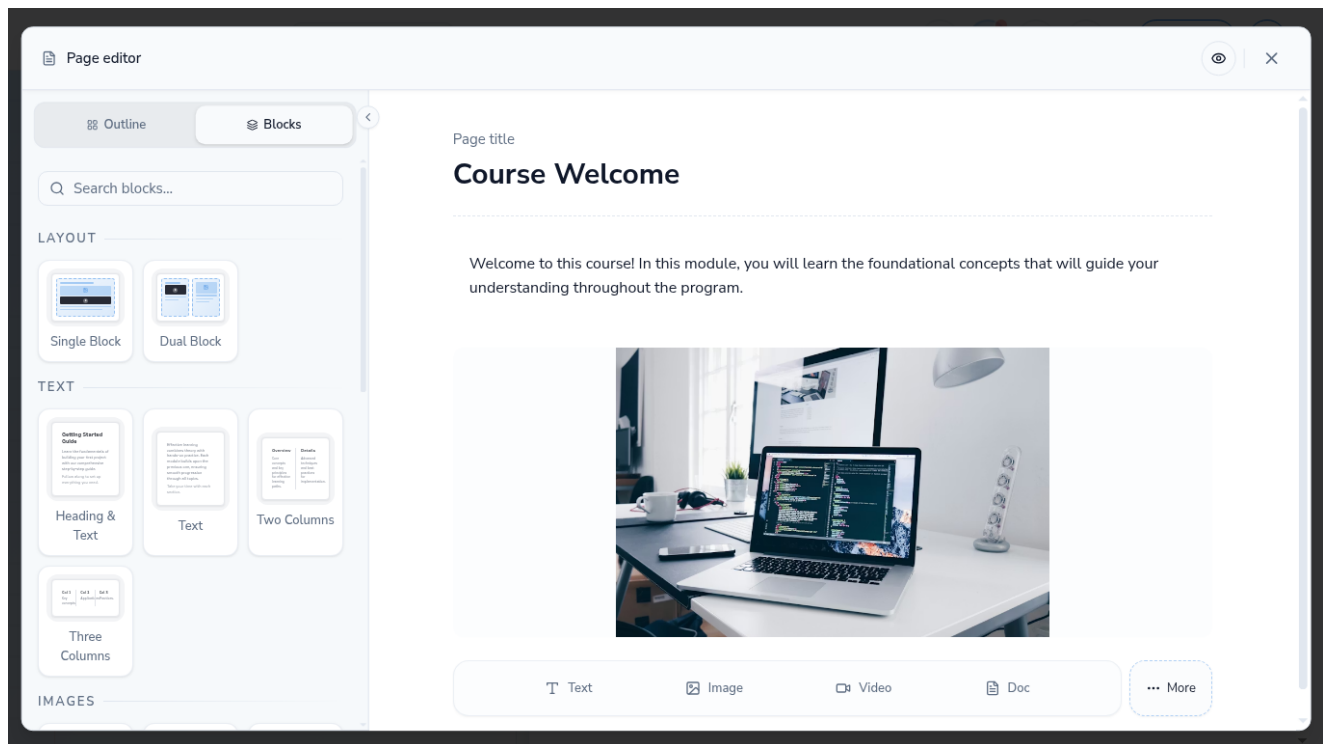

Figure — Blocks library — Layout, Text, and image blocks

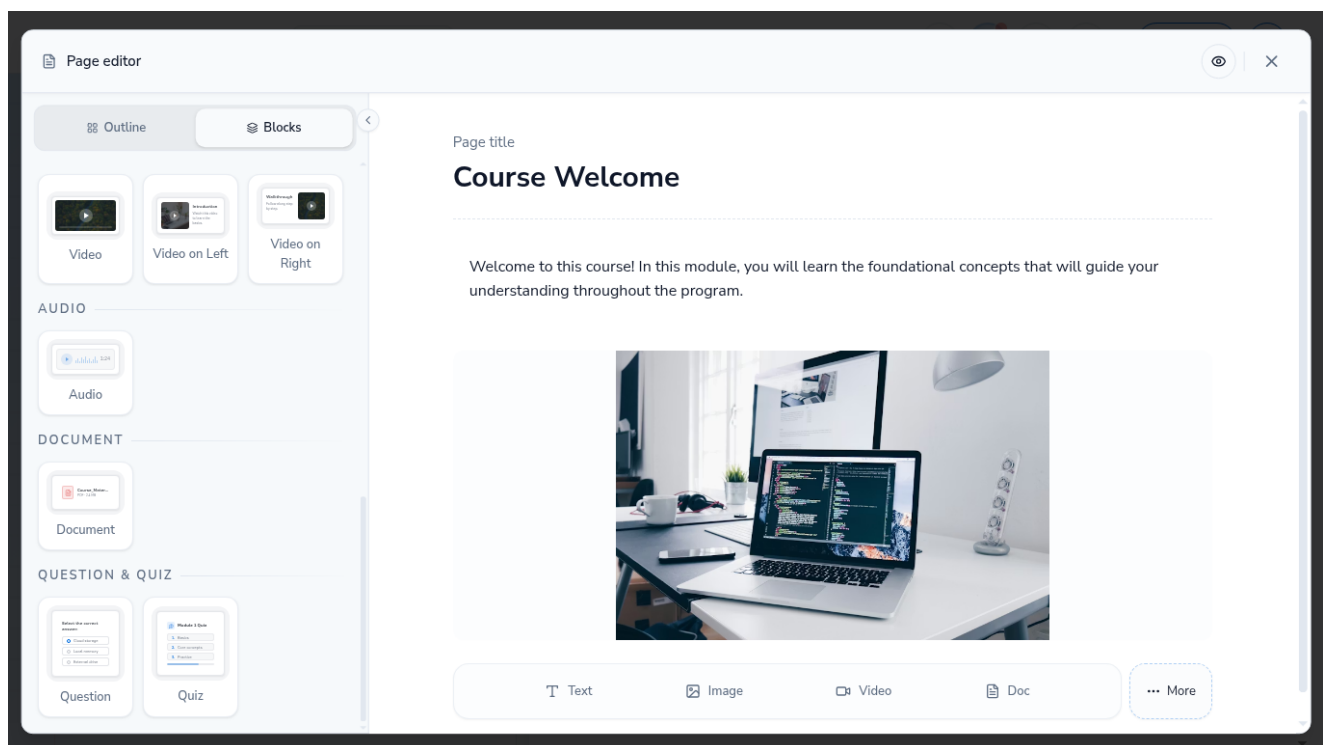

Figure — Blocks library — Video, Audio, Document, Question, and Quiz

9. Section & Page Options (3-dot Menus)

Every section and page in the outline exposes a context menu via the $\cdots$ icon. This is where you rename, duplicate, hide, or delete items without breaking your existing structure.

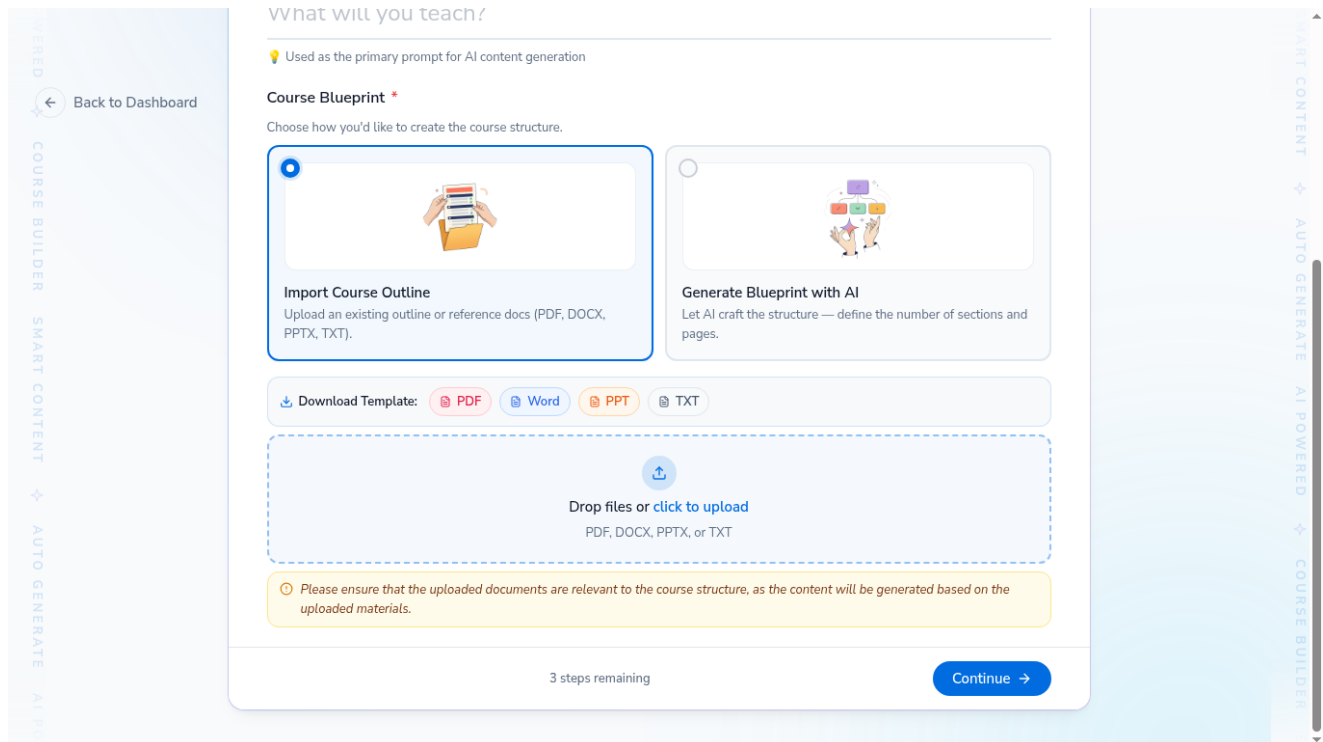

Figure — Section 3-dot menu — Add page, Hide introduction, Duplicate, Delete section

Common actions

- **Add page** — insert a new page inside the current section.
- **Hide introduction** — collapse the section intro on the learner side.
- **Duplicate** — copy the entire section or page including its blocks.
- **Delete** — remove the item (a confirmation dialog protects accidental loss).

10. Content Blocks Overview

Content blocks are the building units of every page. Drag them in from the Blocks panel, or use the quick-add toolbar at the bottom of the page canvas.

Block types covered in this manual

- **Text** — rich text with full formatting toolbar.
- **Image** — upload or generate images with AI.
- **Video** — embed video files up to 2 GB.
- **Audio** — voice-overs, narration, podcasts.
- **File / Document** — PDFs, DOCX, PPTX, XLSX.
- **Question** — single open-ended assessment item.
- **Quiz** — grouped multiple-choice / single-choice questions.

11. Content Block — Text & Rich Text Editor

The Text block opens a full-featured Rich Text Editor with bold, italic, underline, strikethrough, text/background color, alignment, lists, font size, links, tables, quotes, sub/superscript, and undo/redo. The toolbar is responsive — it adapts to the width of the canvas.

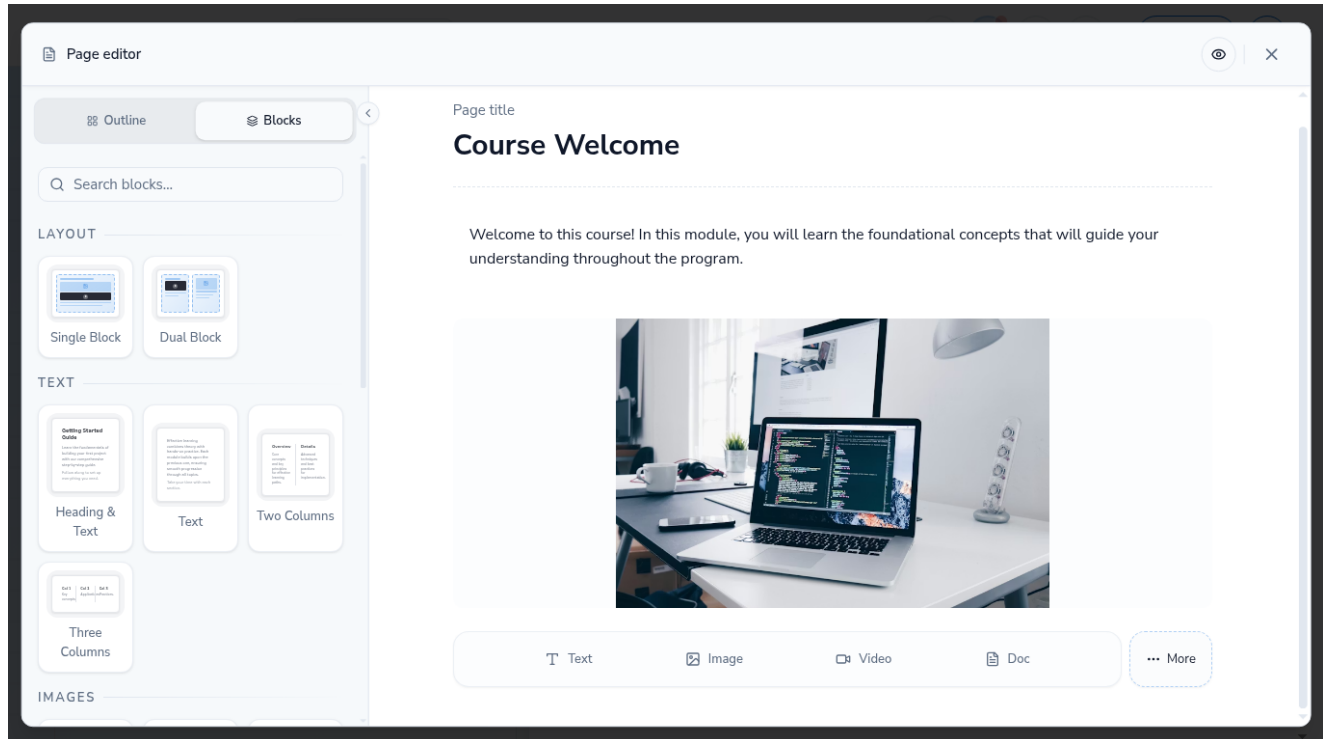

Figure — Rich Text Editor — full formatting toolbar with bold, italic, lists, alignment, color, and link tools

AI Assist — Highlight any text and use the AI assist action to rewrite, summarise, expand, or simplify the selection inline.

12. Content Block — Image

Drop in an image from your computer or generate one with AI. Images support resizing, alignment, alt text, and inline captions.

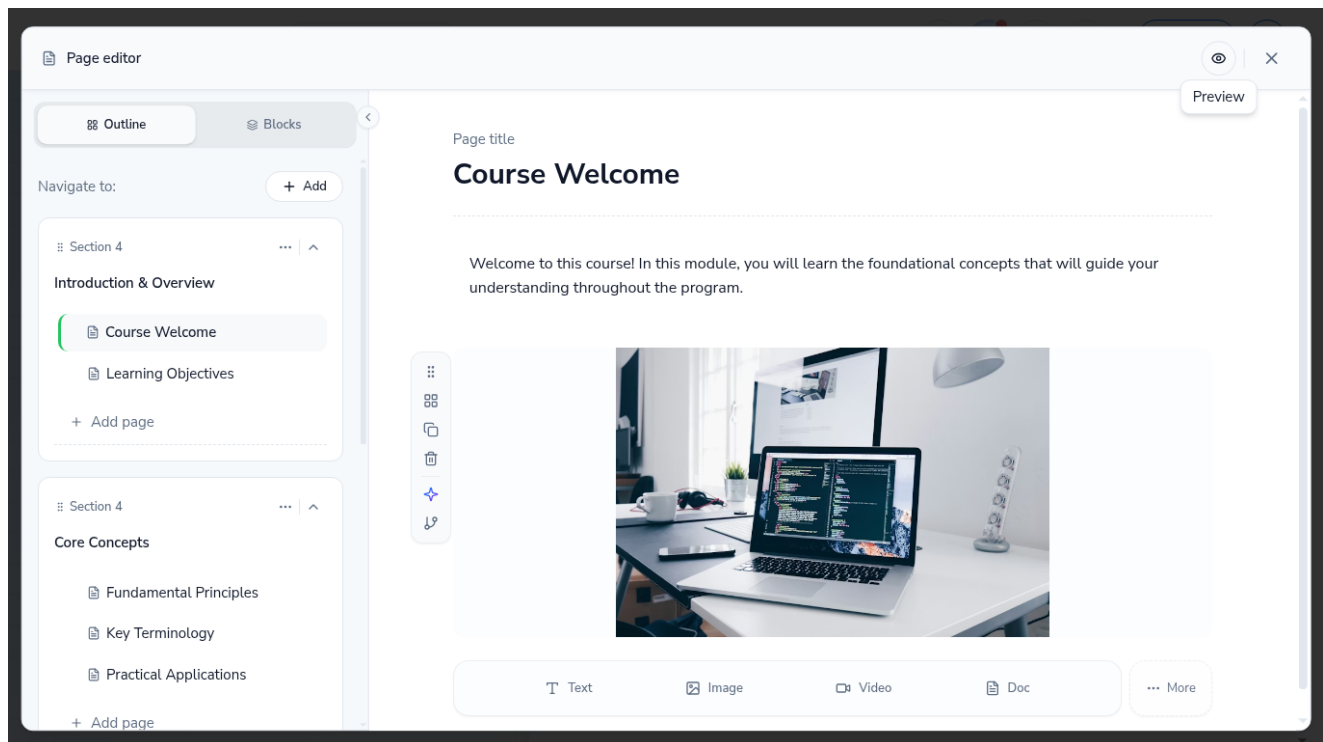

Figure — Image block placed inside a page — image with surrounding text

Supported formats & size

- Formats: JPEG, PNG, BMP, GIF.
- Recommended size: from 240×280 pixels.
- Resize freely on the canvas; drag handles preserve aspect ratio.

AI Assist — Use the **Generate with AI** option inside the image block to produce a unique illustration from a short text prompt — no external tools required.

13. Content Block — Video

The Video block lets you upload an MP4, WebM, or MOV file directly into a page. Use the **Video on Left** or **Video on Right** variants when you want video and explanatory text side-by-side.

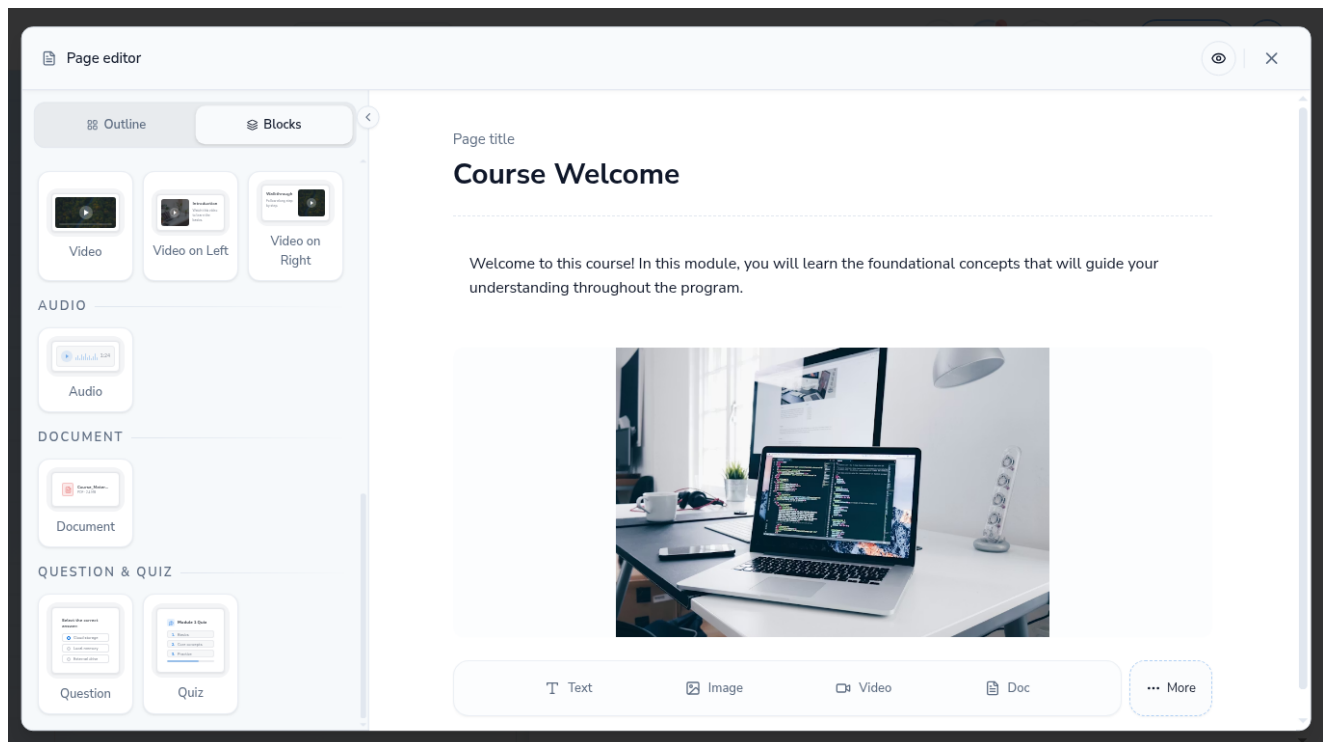

Figure — Block library — Video, Video on Left, and Video on Right variants

Video specs

- Formats: MP4, WebM, MOV.
- Max file size: 2 GB.
- Inline preview with native HTML5 controls (play, pause, fullscreen).

14. Content Block — Audio

The Audio block is ideal for narration, voice-overs, and podcast-style learning. Upload an MP3, WAV, or OGG file and optionally attach a description that displays beneath the player.

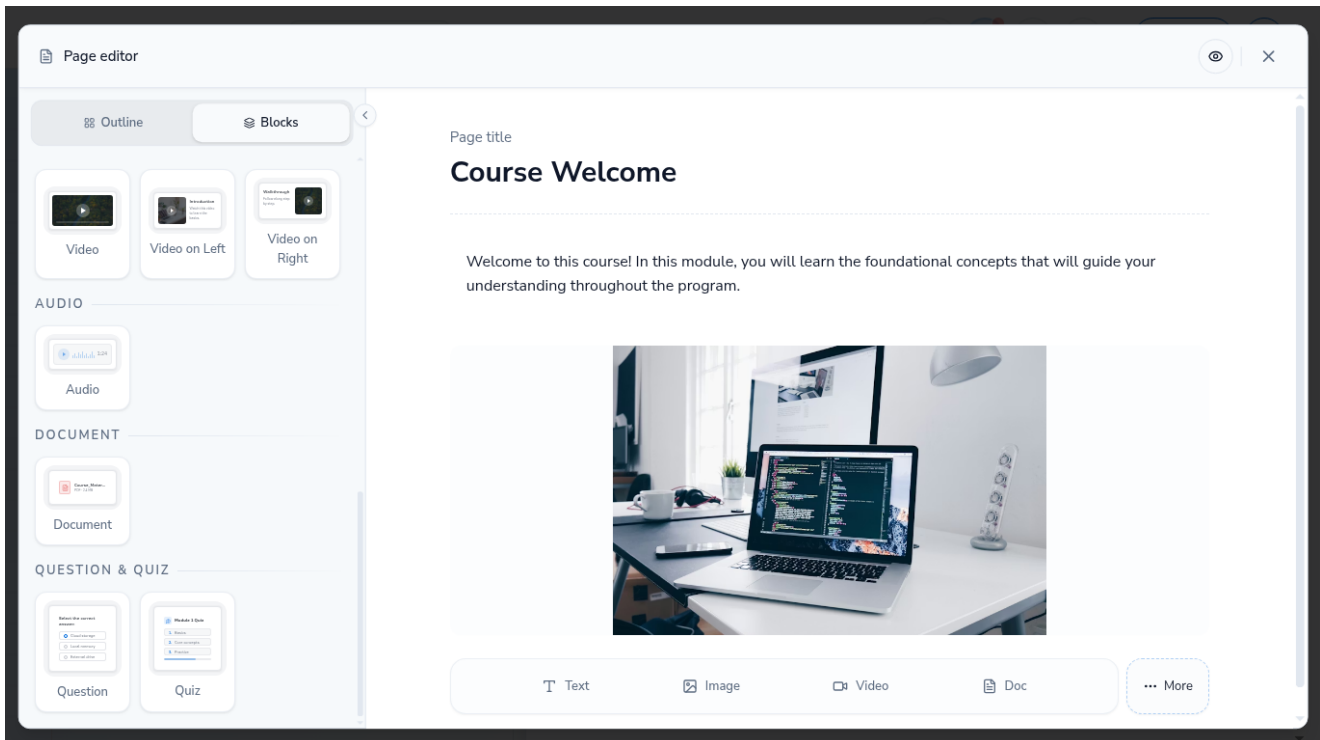

Figure — Block library — Audio block with single-click insertion

Audio specs

- Formats: MP3, WAV, OGG.
- Max file size: 2 GB.
- Optional description field — surfaces as a caption beneath the player.

15. Content Block — File / Document

Attach reference materials directly to a page. PDFs are rendered with an inline viewer; other document types display a download card with file name and an **Open File** action.

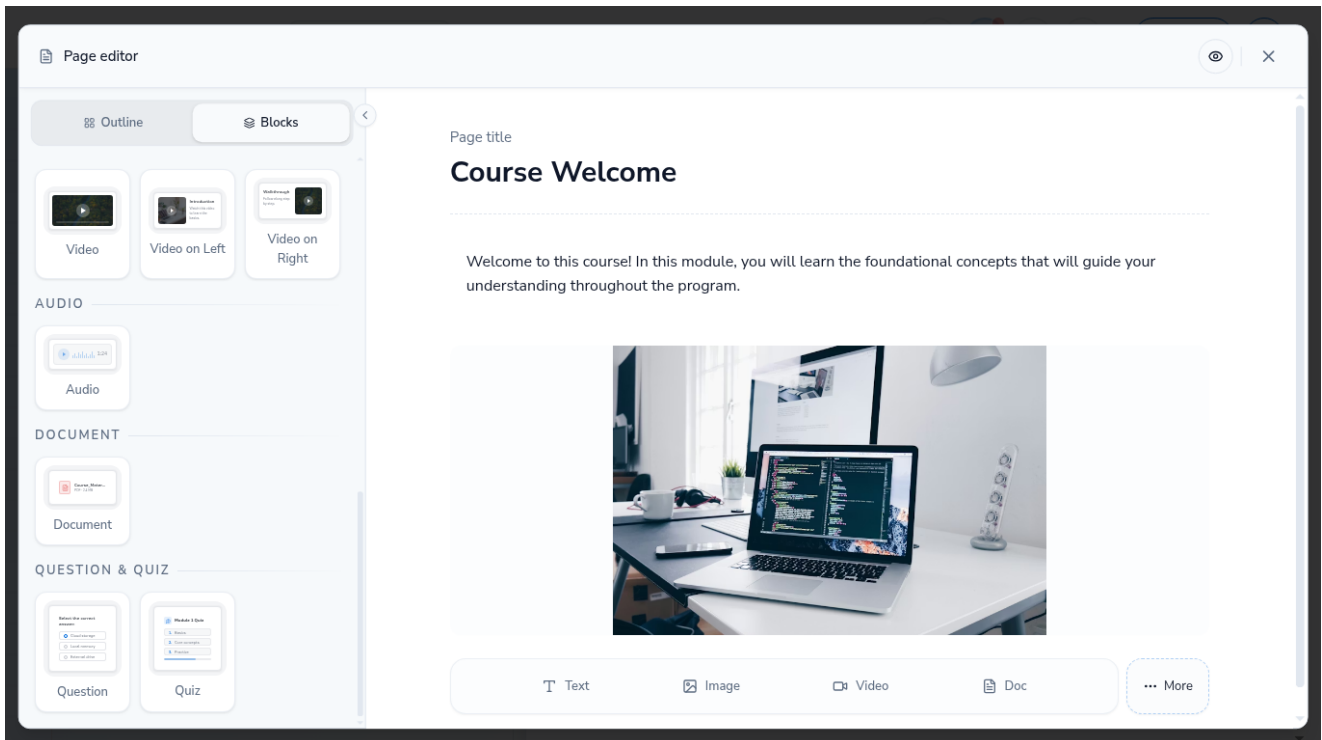

Figure — Block library — Document block for PDFs, Word, PowerPoint, and Excel

Document specs

- Formats: PDF, DOC/DOCX, PPT/PPTX, XLS/XLSX.
- Max file size: 100 MB.
- PDFs render in an embedded viewer; other types open in a new tab.

16. Content Block — Question

Insert a single assessment question inline. Use this for quick knowledge checks placed between content sections.

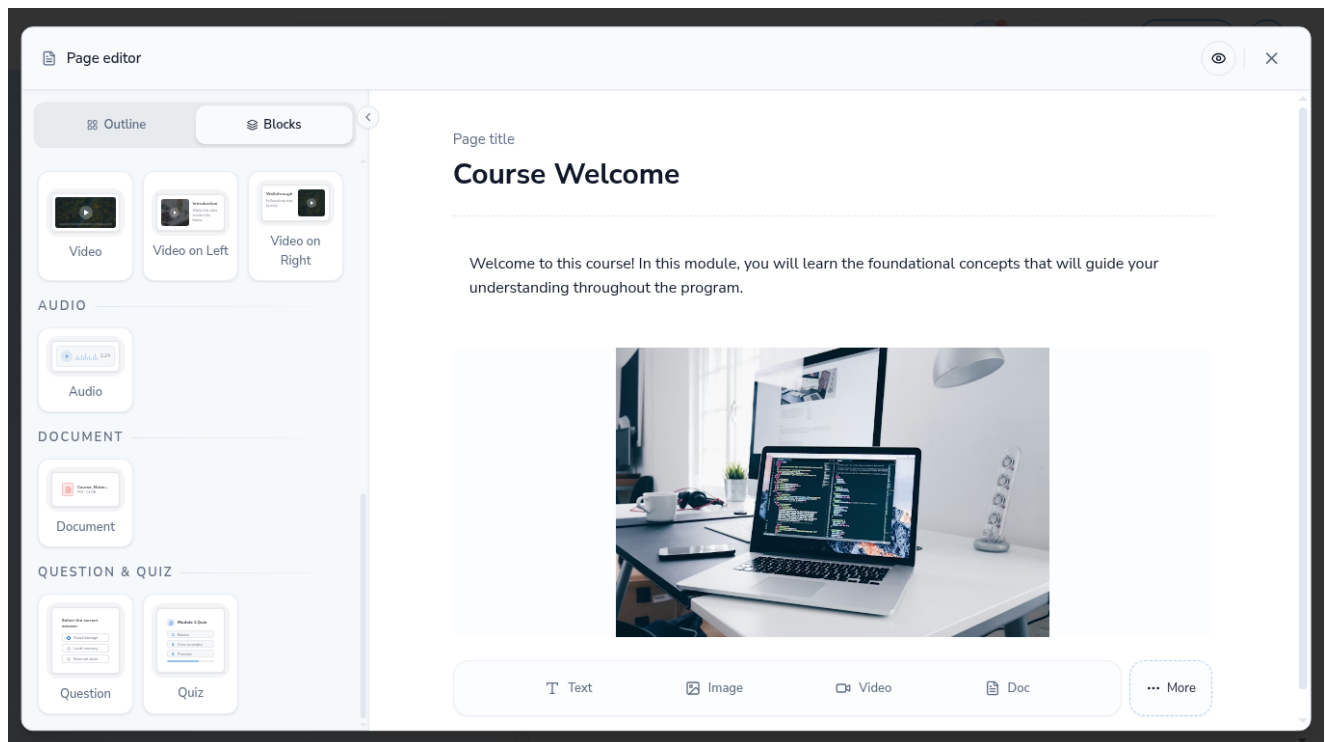

Figure — Block library — Question block tile inside the Question & Quiz category

AI Assist — Click **Generate with AI** in the question block to auto-write a question, answer options, and the correct answer from the surrounding page content.

17. Content Block — Quiz

The Quiz block groups multiple questions into a single, gradable assessment. Each question can be single-choice (SCQ) or multiple-choice (MCQ), and questions can be reordered via drag and drop.

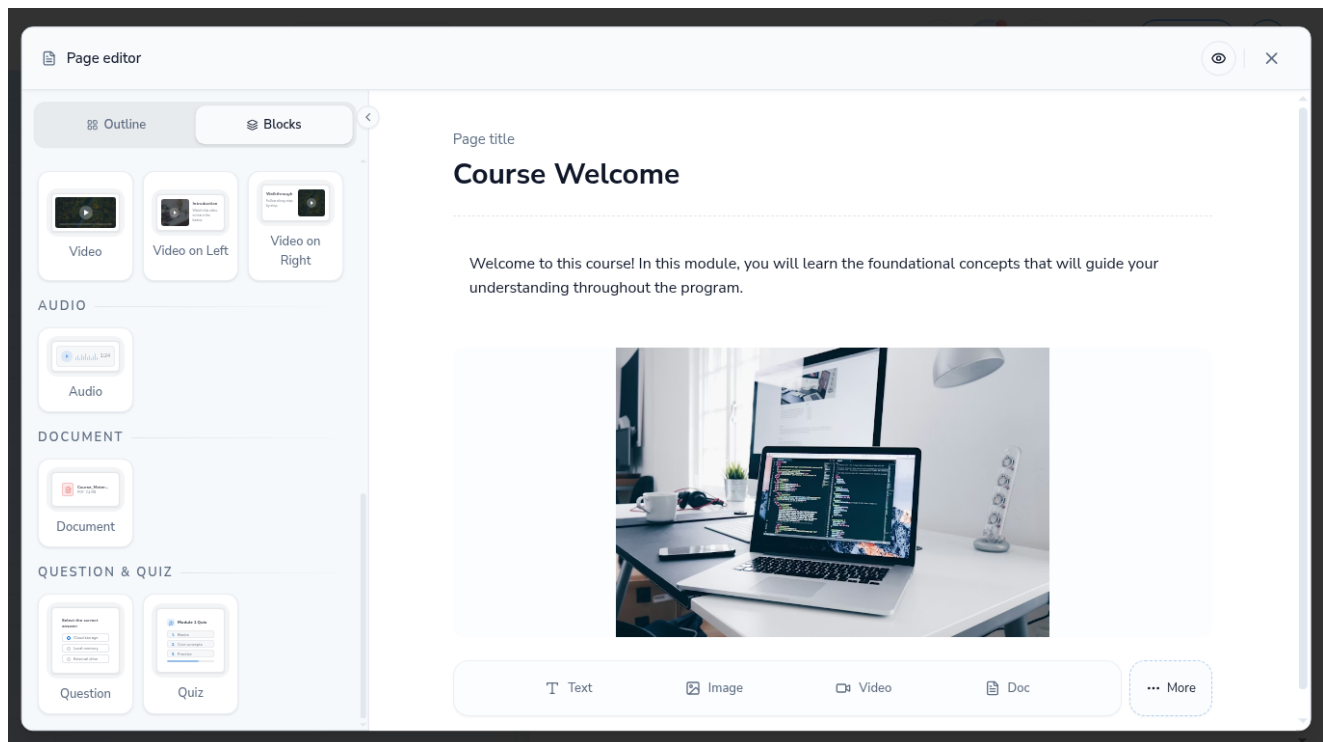

Figure — Block library — Quiz block (grouped questions, scoring, and reordering)

Quiz capabilities

- Mix SCQ and MCQ questions in the same quiz.
- Drag-and-drop question reordering.
- Per-question feedback and correct-answer explanations.
- Automatic scoring at the end of the quiz.

AI Assist — Use **Generate Quiz with AI** to create a full quiz (MCQ + SCQ) from the current page's content in seconds.

18. AI Support Panel

The AI Support side panel is your always-on assistant. Open it from the sparkle icon in the editor header to access guidelines, exclusions, and contextual AI actions for whatever you're editing.

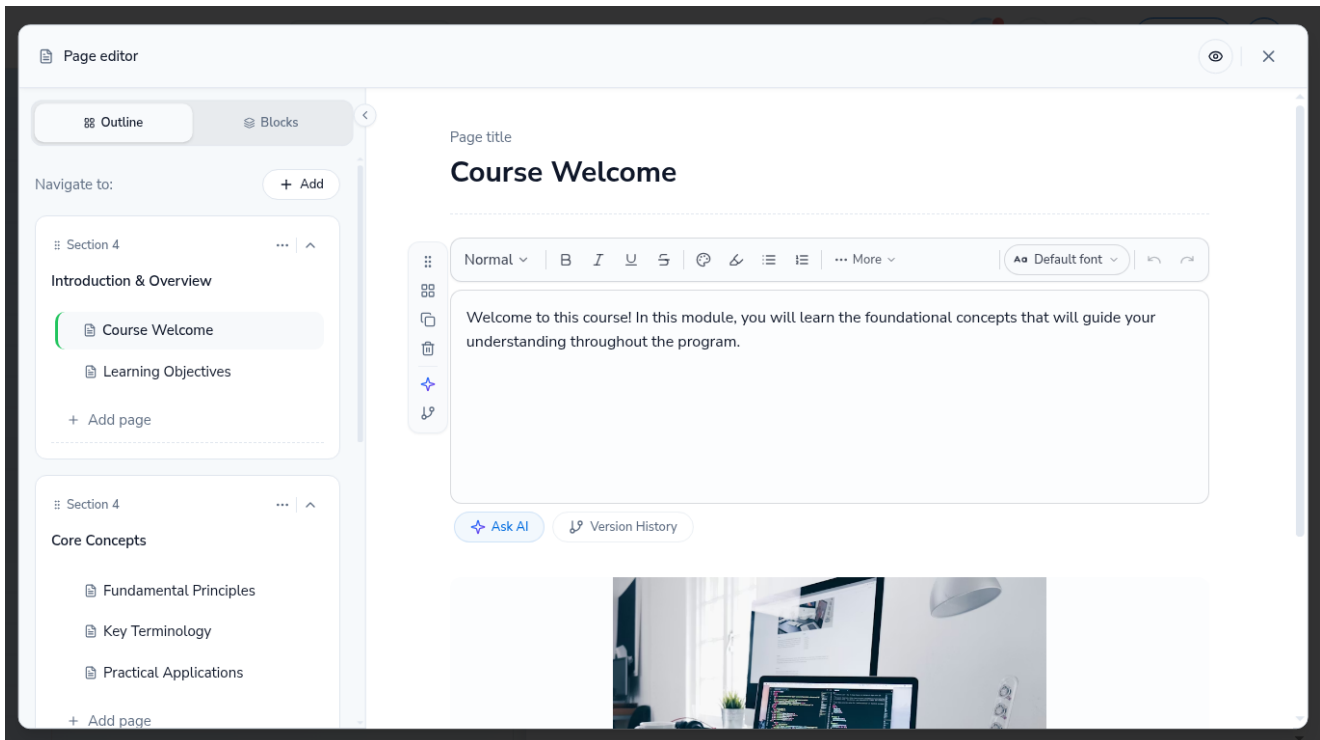

Figure — AI Support panel — page duration, supporting documents, and Save & Apply Configuration

19. Course Preview

Click the eye icon in the editor header to launch the learner-side preview. The preview emulates desktop, tablet, and mobile so you can verify how content renders on every device before publishing.

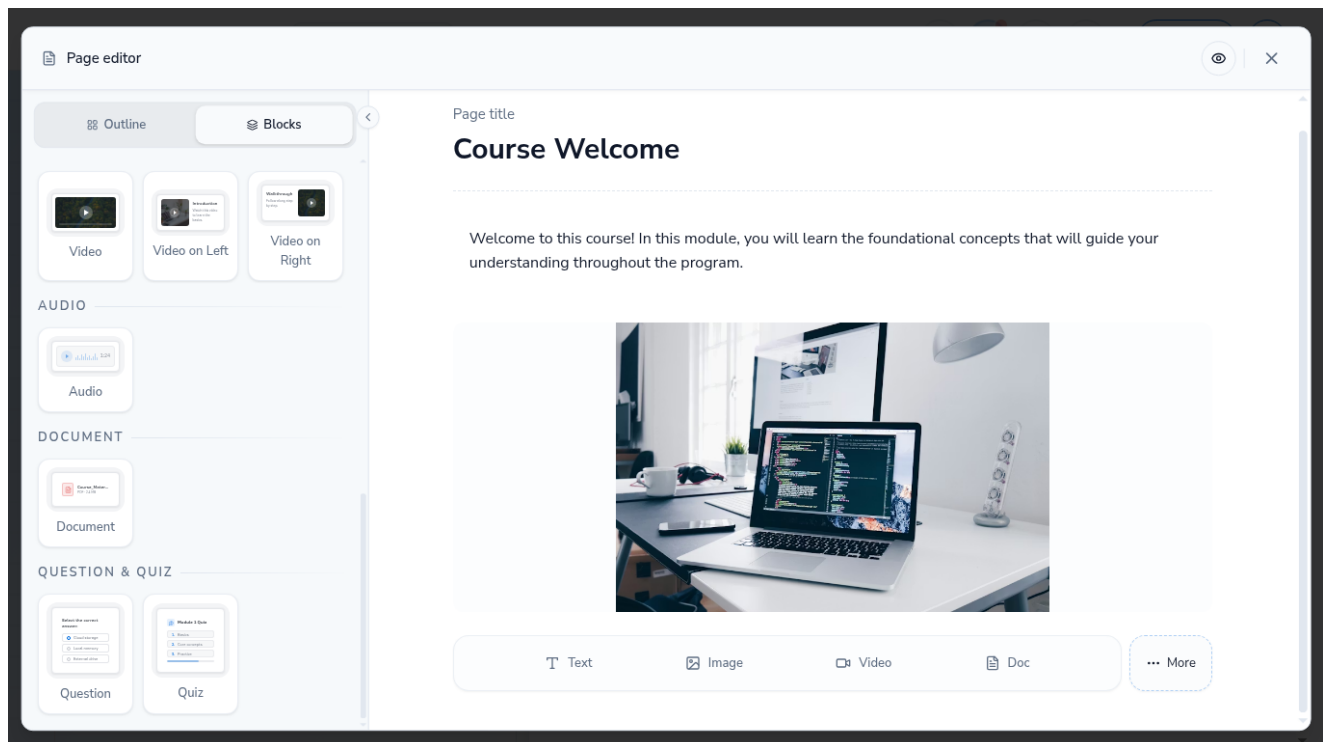

Figure — Course preview — desktop and mobile device emulators side by side

20. Exporting a Course

Click **Export** in the editor header to package your course in the format your LMS or learners need.

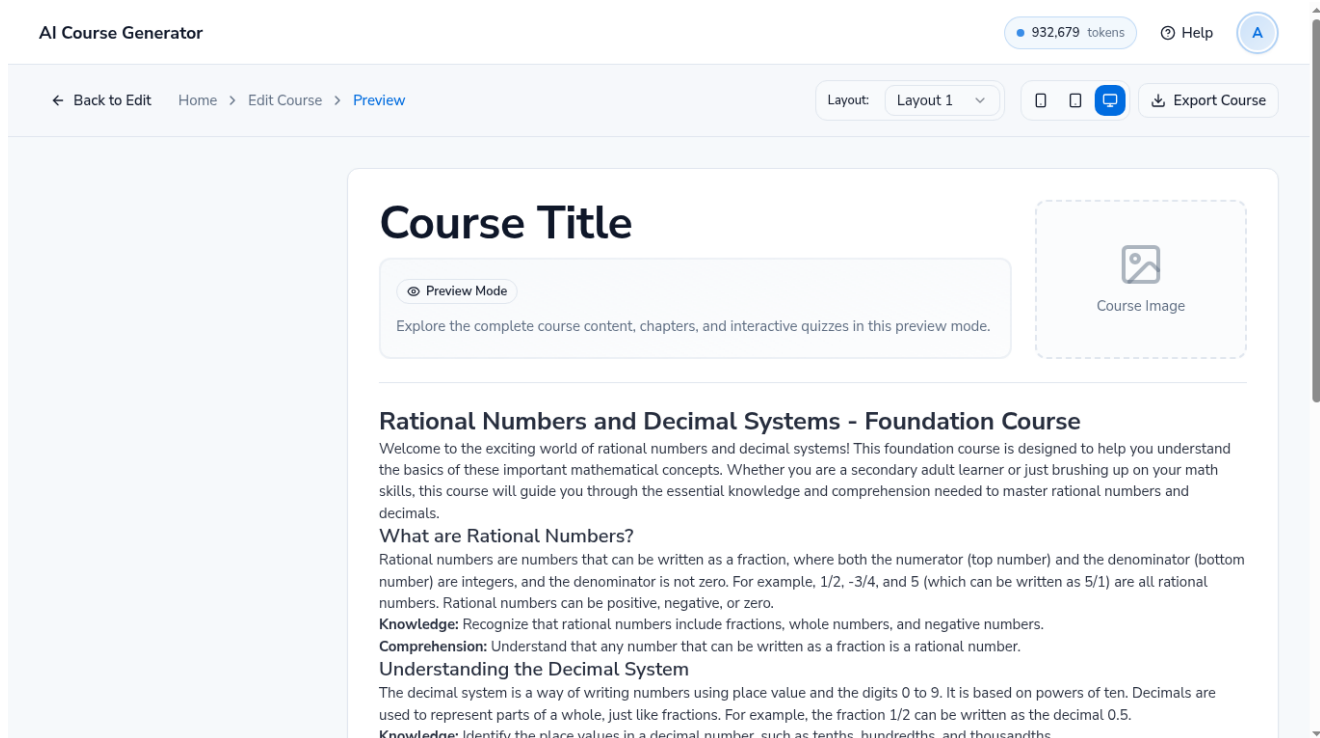

Figure — Export Course dialog — HTML, PowerPoint, Word, SCORM, and PDF

Available export formats

- **HTML** — interactive web bundle.
- **PowerPoint** — fully editable .pptx deck.
- **Word** — print-ready .docx document.
- **SCORM** — LMS-compatible package (see Section 21).
- **PDF** — universal portable document.

21. SCORM Preferences

When you export as SCORM, the SCORM Preferences dialog lets you configure page duration, completion messages, fail-attempt messages, and background appearance.

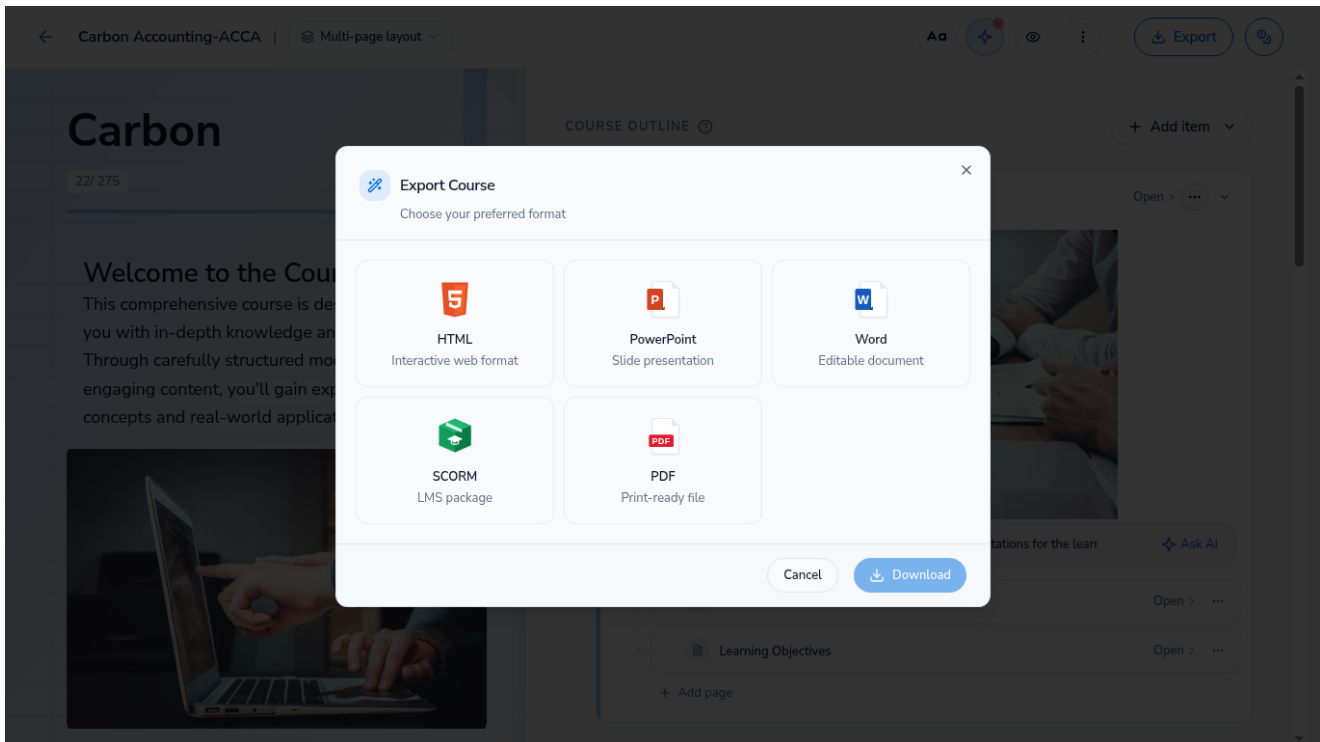

Figure — SCORM Preferences — page duration, background, completion and fail messages

22. Help Center & Support

Need a refresher? Click **Help** in the top-right of the app to open the in-app Help Center. From there you can browse quick links, watch workflow walkthroughs, read the FAQ, and download this product manual.
