

Content Studio

Product Manual — Visual Edition

A complete, screen-by-screen onboarding guide for first-time users.

Covers every workflow: course creation, content blocks, rich text editing, AI assistance, course blueprints, previews, and exports.

- 24. Help & Support

1. Sign In & Welcome

Purpose. Every session begins on the sign-in screen. Use your Login ID and Password to access your workspace. New users can click **Sign up** to create an account.

Sign-in screen

<https://coursed.lovable.app/auth>

Fields & Controls

Field / Control	Description
Login ID	Your unique account identifier (email or username).
Password	Use the eye icon to toggle visibility.
Forgot Password?	Triggers a password-reset email flow.
Sign up	Open the new-account registration form.

Tip: Your session is protected by a secure token stored in your browser. Closing the tab will not log you out immediately.

2. Dashboard

Purpose. The Dashboard is your home screen. It greets you with a welcome banner, shows your AI token balance, lets you start new courses, and lists every course you have created.

Dashboard

<https://coursed.lovable.app/dashboard>

Fields & Controls

Field / Control	Description
Welcome Banner	Personalised greeting with summary of recent activity.
Token Counter	Shows the AI tokens available on your account (top right).
Search Courses	Type any keyword to instantly filter the All Courses grid.
Pagination	Choose how many cards appear per page (10, 20, 50).
Course Card	Thumbnail, title, last-updated timestamp, and a View action.

Actions

Button	Action
+ Create Course	Opens a menu with Step-by-Step Creation and AI Auto-Generate.
Quick-start (refresh icon)	Resumes your most recently edited course.

Button	Action
View >	Opens the course in the editor.

Tip: Use the search box before scrolling — it matches partial words, so typing 'mark' surfaces 'Marketing' instantly.

3. Course Creation Paths

Purpose. Content Studio offers two creation paths so you can choose between full manual control or an AI-driven head start.

The screenshot shows the 'Create Course' dialog in the 'AI Course Generator' application. The interface includes a top bar with '932,679 tokens', 'Help', and a user profile icon. Below the top bar is a breadcrumb trail: 'Dashboard > Create Course'. The main area has two tabs: 'Details' (active) and 'Preferences'. The 'Details' tab contains two sections: 'Course Title: *' with a subtext 'Give your course a descriptive name' and an input field labeled 'Enter course title'; and 'Define Course Structure: *' with a subtext 'Choose how you want to define your course structure'. Under 'Define Course Structure', there is a radio button for 'Blueprint' and a dropdown menu labeled 'Select Blueprint' with the option 'Budgeting in Management' selected.

Create Course dialog

<https://coursed.lovable.app/dashboard>

Fields & Controls

Field / Control	Description
Step-by-Step Creation	Hand-craft your course in either a Multi-page or Single-page editor.
AI Auto-Generate	Provide a topic and let the AI Course Wizard build a complete blueprint and content.

Tip: Both paths produce the same underlying course object — you can switch a hand-built course to AI assistance later, and vice versa.

4. Step-by-Step Creation — Multi-page Layout

Purpose. The Multi-page editor is designed for full-length courses split into sections and pages. The left panel holds the course intro and metadata; the right panel is the **Course Outline** where you build the structure.

Multi-page editor

<https://coursed.lovable.app/create-course/multipage>

Fields & Controls

Field / Control	Description
Course Title	Editable course name (max 275 characters).
Introduction	A short blurb shown to learners before the first page.
Course Outline	Tree view of sections, pages, and questions.
Layout Selector	Switch between Multi-page and Single-page without losing content.
Font Selector (Aa)	Apply a global typography style.
AI Sparkle	Open the AI Support drawer to set course-wide AI preferences.
Preview (eye)	Open a live device-emulator preview.

Field / Control	Description
Export	Generate SCORM, PDF, HTML, Word or PowerPoint output.

Actions

Button	Action
+ Add item	Insert a Section, Page, or Question.
Open ›	Open the section or page editor.
Drag handle	Re-order sections and pages by drag-and-drop.

Tip: Sections group related pages — drag and drop to re-order them at any time.

5. Step-by-Step Creation — Single-page Layout

Purpose. The Single-page editor is built for short, focused micro-courses. All content lives on one continuously-scrolling page with a sticky left-hand outline acting as a Table of Contents.

The screenshot shows the 'AI Course Generator' interface. At the top, there's a header with '932,679 tokens', 'Help', and a user profile icon. Below the header, a breadcrumb trail shows 'Dashboard > Create Course'. The main content area has two tabs: 'Details' (active) and 'Preferences'. Under the 'Details' tab, there are two sections. The first section, 'Course Title: *', has a subtext 'Give your course a descriptive name' and a text input field with the placeholder 'Enter course title'. The second section, 'Define Course Structure: *', has a subtext 'Choose how you want to define your course structure'. It features a radio button labeled 'Blueprint' which is selected. Below this is a 'Select Blueprint' dropdown menu showing 'Budgeting in Management' with a downward arrow.

Single-page editor concept

<https://coursed.lovable.app/create-course/singlepage>

Fields & Controls

Field / Control	Description
Course Outline (left)	Click any item to scroll to that section instantly.
Content Blocks tab	Drag-and-drop palette of text, image, video, audio, doc and quiz blocks.
Course Title (center)	Inline-editable title displayed at the top of the scroll area.

Actions

Button	Action
+ Add	Open the create menu for sections or pages.
Layout Selector	Switch to Multi-page; existing content is preserved.

Tip: Single-page is ideal for refresher modules, policy briefings, or any course under ~10 minutes long.

6. AI Auto-Generate — Course Wizard

Purpose. The AI wizard creates a complete course end-to-end in four guided steps: **Course Intent**, **Course Details**, **Preferences**, and **Blueprint** review.

Step 1 — Course Intent with Blueprint choice

<https://coursed.lovable.app/ai-generate-course>

Fields & Controls

Field / Control	Description
Course Title	Primary prompt used for AI content generation.
Course Blueprint	Choose Import Course Outline or Generate Blueprint with AI .
Stepper	Top progress bar showing the four wizard steps.
Side Ribbon	Decorative AI-Powered Course Builder branding.

AI Capability: The AI Course Wizard understands intent. Provide a clear title (e.g. “ACCA Carbon Accounting — Intermediate”) and the AI infers audience, depth, terminology, and Bloom-aligned objectives.

Tip: If you upload a reference document, the AI mirrors its tone and terminology. Files up to 25 MB are supported.

7. Course Blueprint — Import Course Outline

Purpose. Choose **Import Course Outline** when you already have a syllabus, slide deck, or training plan. Upload the file and the AI will mirror its structure, headings, and terminology when generating content.

The screenshot shows the 'Import Course Outline' workflow in the Course Builder interface. The main heading is 'What will you teach?'. Below it, a note states 'Used as the primary prompt for AI content generation'. The 'Course Blueprint' section prompts the user to 'Choose how you'd like to create the course structure.' Two options are presented: 'Import Course Outline' (with an icon of hands holding a folder) and 'Generate Blueprint with AI' (with an icon of hands holding a puzzle piece). The 'Import Course Outline' option is selected. Below these options, a 'Download Template' section offers PDF, Word, PPT, and TXT formats. A large dashed box labeled 'Drop files or click to upload' is provided for file uploads, with a note that it supports PDF, DOCX, PPTX, or TXT. A yellow banner below the upload area states: 'Please ensure that the uploaded documents are relevant to the course structure, as the content will be generated based on the uploaded materials.' At the bottom, it indicates '3 steps remaining' and a 'Continue' button.

Import Course Outline workflow

<https://coursed.lovable.app/ai-generate-course>

Fields & Controls

Field / Control	Description
Download Template	Get a starter outline in PDF, Word, PPT, or TXT format.
Drop Zone	Drag files or click to upload. Supports PDF, DOCX, PPTX, TXT.
File Size	Up to 25 MB per file.
Validation Banner	Confirms the uploaded document is relevant before content generation.

AI Capability: The AI parses your document, extracts headings, identifies section/page hierarchy, and maps them onto Content Studio's course schema — preserving your terminology while filling in learning objectives, body copy, and imagery.

Tip: Cleaner inputs produce cleaner outputs. A well-structured outline with numbered headings yields the most accurate blueprint.

8. Course Blueprint — Generate with AI

Purpose. Choose **Generate Blueprint with AI** when you only have a topic. Specify the number of sections and pages, and the AI will architect the full course structure from scratch.

Fields & Controls

Field / Control	Description
Sections	Number of top-level chapters the AI will produce (1–20).
Pages / Section	Average page count per section (1–8).
+ / – steppers	Adjust counts inline.
Continue ›	Validate and advance to Step 2 (Course Details).

AI Capability: The AI uses your title, audience, and duration preferences to decide where to place introductions, deep-dives, summaries, and assessments — aligned to Bloom's Taxonomy verbs.

Tip: Start small (3–5 sections, 3–4 pages each). You can always add more later.

9. AI-Generated Course — Editor View

Purpose. After the wizard finishes, you land on the Multi-page editor pre-populated with AI content: section titles, page outlines, descriptions, hero imagery, and Bloom-aligned objectives. From here you can refine anything by hand.

AI-generated course in the editor

<https://coursed.lovable.app/edit-course/1>

Fields & Controls

Field / Control	Description
Section Cards	Numbered cards (01, 02 ...) with thumbnail, title and Ask AI shortcut.
Section Objective	Plain-English learning outcome generated for each section.
Pages list	Each section expands to reveal AI-drafted page titles.
AI Indicator (sparkle)	Header badge showing AI Support is active for this course.

Actions

Button	Action
Open >	Open the section or page editor to review and edit content.
Ask AI	Inline AI assistant for the highlighted block (rewrite, expand, simplify).

Button	Action
... More	Duplicate, regenerate, or delete the section / page.

Tip: AI-generated assets are clearly labelled. Always do a quick human review before exporting to your LMS.

10. Section & Page Menus (3-dot More options)

Every section card and every page row exposes a ... **(More)** menu for fast, context-aware actions. The options differ slightly between sections and pages.

Section — 3-dot menu

Section 3-dot more options menu

<https://coursed.lovable.app/edit-course/1>

Field / Control	Description
Add scope	Define an Introduction, Learning Objectives, and Conclusion scope for the section.
Hide introduction	Hide / show the section introduction block in learner view.
Open section	Jump directly into the section editor.
Duplicate	Clone the entire section with all its pages.
Delete section	Permanently remove the section (confirmation required).

Page — 3-dot menu

Page 3-dot more options menu

<https://coursed.lovable.app/edit-course/1>

Field / Control	Description
Add scope	Attach learning objectives or scope notes to a single page.
Duplicate	Clone the page with all of its content blocks.
Delete	Permanently remove the page (confirmation required).

Tip: The 3-dot menus are keyboard accessible — press Tab to focus the card, then Enter to open the menu.

11. Page Editor — Overview

Purpose. The Page Editor opens in a full-screen dialog. The left rail switches between **Outline** (course navigation) and **Blocks** (content block library). The right pane is the editable page canvas. A floating block toolbar on the left edge of each block exposes per-block actions.

Page editor with floating block toolbar and add-content bar

<https://coursed.lovable.app/edit-course/1>

Fields & Controls

Field / Control	Description
Outline tab	Navigate sections and pages without leaving the editor.
Blocks tab	Open the full content-block library.
Block toolbar (left)	Drag handle, layout, duplicate, delete, Ask AI, and version history per block.
Add-content bar (bottom)	Quick-add Text / Image / Video / Doc / More.
Preview (eye)	Open the page in the device preview.

Actions

Button	Action
■ Drag	Re-order blocks by dragging from the handle.
Ask AI (sparkle)	Open inline AI tools for this block.

Button	Action
Version history	Restore previous AI-generated or manual versions.

Tip: The left-edge block toolbar appears whenever you hover or focus a block. It is keyboard reachable with Tab.

12. Content Blocks Library

Open the **Blocks** tab on the left rail (or click **More** on the bottom add-content bar) to access the full library. Blocks are organised into Layout, Text, Images, Video, Audio, Document, and Question & Quiz categories.

Blocks library — Layout & Text categories

Blocks library — Video, Audio, Document, Question & Quiz

Category	Blocks
Layout	Single Block, Dual Block — create multi-column compositions.
Text	Heading & Text, Text, Two Columns, Three Columns.
Images	Image, Image with caption, Image variants.
Video	Video, Video on Left, Video on Right.
Audio	Audio block with waveform player.
Document	PDF / DOCX file attachments.
Question & Quiz	Single questions and full multi-question quizzes.

Tip: Drag any block from the library onto the canvas, or click to insert at the cursor position.

13. Content Block — Text & Rich Text Editor

Purpose. The Text block uses a full-featured rich text editor (Tiptap). A floating toolbar appears at the top of the block whenever it is focused.

Rich text editor toolbar in a focused Text block

Fields & Controls

Field / Control	Description
Paragraph style	Normal / Heading 1–6 dropdown.
B / I / U / S	Bold, italic, underline, strike-through.
Color / Highlight	Inline text colour and background highlight.
Lists	Bullet list and numbered list.
... More	Alignment, link, code, blockquote, horizontal rule.
Default font	Per-block font override (inherits course font).
Undo / Redo	Block-level history.

Actions

Button	Action
Ask AI	Rewrite, simplify, expand, summarise, or translate the selected text.

Button	Action
Version History	View and restore earlier versions of the block.

AI Capability: Selecting text and pressing **Ask AI** opens contextual suggestions: *Rewrite, Simplify, Expand, Summarise, Translate, Fix grammar*. Each suggestion can be accepted, modified, or discarded.

Tip: HTML entered through Ask AI is automatically sanitised with DOMPurify to keep your course safe.

14. Content Block — Image

Purpose. Add visual context with the Image block. You can upload from your device, choose from the asset repository, or generate a brand-new image with AI.

Fields & Controls

Field / Control	Description
Upload	PNG, JPG, or WebP — up to 10 MB.
Image Repository	Re-use images already in this course.
Alt text	Mandatory accessibility description.
Caption	Optional short caption rendered below the image.
Resize handles	Drag corners to resize within layout constraints.

AI Capability: The **Generate with AI** button opens a prompt dialog. Describe the image you want; the AI returns multiple variations you can pick from. Generated images are watermarked with an AI badge until you accept them.

Tip: Always provide alt text. Screen readers use it, and it improves SEO for HTML-exported courses.

15. Content Block — Video

Purpose. Embed video content directly into the page. Three layout variants are available: full-width Video, Video on Left (with text on right), and Video on Right.

Fields & Controls

Field / Control	Description
Upload	MP4, MOV, WebM — up to 200 MB.
URL Embed	Paste a YouTube or Vimeo URL.
Poster image	Custom thumbnail shown before play.
Captions	Upload a .vtt subtitle file for accessibility.
Side description	For left/right variants, paired rich text.

AI Capability: Ask AI can *summarise* a video transcript and auto-generate the paired description for the Video on Left / Right layouts.

Tip: For longer videos, prefer URL embeds (YouTube / Vimeo) so the LMS package stays light.

16. Content Block — Audio

Purpose. The Audio block renders an inline waveform player. Ideal for podcasts, narration, and pronunciation guides.

Fields & Controls

Field / Control	Description
Upload	MP3, WAV, OGG — up to 50 MB.
Title	Display label for the audio track.
Transcript	Optional text transcript for accessibility.
Autoplay	Disabled by default per WCAG 2.2 guidelines.

AI Capability: Provide an audio file and use Ask AI to generate a written transcript that meets accessibility requirements.

17. Content Block — File / Document

Purpose. Attach reference documents that learners can download or view inline.

Fields & Controls

Field / Control	Description
Upload	PDF, DOCX, XLSX, PPTX — up to 25 MB.
Display name	Friendly name shown on the document card.
Description	Short note explaining the resource.
Inline preview	PDFs render in an embedded viewer; other formats download.

Tip: Use the File block for reference material, checklists, or job aids that learners need to keep after the course.

18. Content Block — Question

Purpose. Insert a single assessment question into any page. Useful for quick knowledge checks between content blocks.

Fields & Controls

Field / Control	Description
Question type	Single-choice (SCQ) or Multiple-choice (MCQ).
Question text	Rich text supported, including images and formulas.
Options	2–6 answer choices; mark one or more as correct.
Feedback	Optional explanation shown after the learner answers.
Points	Score weighting (used in quizzes and SCORM exports).

AI Capability: Generate Question with AI reads the surrounding page content and proposes a contextually relevant question with plausible distractors. You can re-roll or edit before accepting.

19. Content Block — Quiz

Purpose. Group multiple questions into a graded quiz. Quizzes can appear inside a section (formative) or at the end of a course (summative).

Fields & Controls

Field / Control	Description
Quiz title	Heading shown to learners.
Question grid	Drag-to-reorder cards with SCQ/MCQ indicators.
Pass criteria	Minimum score percentage (used in SCORM reporting).
Randomisation	Shuffle question order and answer options.
Time limit	Optional countdown timer.
Feedback mode	Immediate per-question or end-of-quiz summary.

AI Capability: Generate Quiz with AI turns a whole section into a balanced quiz: it varies Bloom levels (Remember / Understand / Apply / Analyse), distributes SCQ vs MCQ, and writes feedback for every option.

Tip: Pair a Quiz at the end of each section with a final summative Quiz at the end of the course for the strongest learning outcomes.

20. AI Support Drawer

Purpose. Open from the sparkle icon in the editor header. Configure course-wide AI preferences once, and every AI generation respects them.

AI Support drawer

<https://coursed.lovable.app/edit-course/1>

Fields & Controls

Field / Control	Description
Page Duration	Target time per page in minutes (3 / 5 / 10 / 15 or custom).
Supporting Documents	Upload reference PDFs / DOCX / TXT (up to 20 MB each) to ground AI output.
Course Guidelines	Plain-language rules the AI must follow (e.g. tone of voice, terminology).
Exclusions	Topics, brands, or phrases the AI must never mention.

AI Capability: AI Support settings are a one-time setup per course. After **Save & Apply Configuration**, every Ask AI, Generate Block, and wizard run uses these constraints automatically.

Tip: Add a competitor name to Exclusions to guarantee it never appears in any AI-generated copy.

21. Course Preview — Multi-page & Single-page

Purpose. Preview is a learner-perspective simulation. The Multi-page preview shows a cover hero with a Start Course CTA and a full outline. The Single-page preview shows the continuous-scroll experience with an active-item rail. Both include Desktop / Tablet / Mobile / Wide emulators.

Course preview

<https://coursed.lovable.app/course-preview/1>

Fields & Controls

Field / Control	Description
Cover Hero	Course title, progress percentage and Start Course CTA.
Outline (right)	Expandable sections with thumbnails and page counts.
Active-item rail	(Single-page) highlights the section currently in view.
Finish button	(Single-page) triggers confetti and the end-of-course banner.
Device Emulator	Toggle Desktop / Tablet / Mobile / Wide layouts.

Tip: Always check Mobile and Tablet emulators before publishing — most learners consume courses on the go.

22. Exporting Your Course

Purpose. Click **Export** in the editor header to open the format picker. Choose any of the five output formats. Each format is generated server-side and downloaded directly to your device.

Export Course dialog

Fields & Controls

Field / Control	Description
HTML	Interactive web format. Self-contained ZIP with all assets.
PowerPoint	Slide presentation (.pptx). One slide per page.
Word	Editable document (.docx). Linear text export.
SCORM	LMS package (.zip). SCORM 1.2 and 2004 compatible.
PDF	Print-ready file. Honours the course's font and theme.

Tip: HTML and SCORM exports include all media. Word and PDF flatten interactive elements into static content.

23. SCORM Export Preferences

Purpose. When you choose SCORM, an additional preferences panel appears below the format grid. These settings shape how the package behaves inside an LMS.

SCORM preferences

Fields & Controls

Field / Control	Description
Page Duration	Minimum time learners must spend on each page before progressing.
Background Image	Optional image rendered behind every page (PNG/JPG, 1920×1080 recommended).
Background Opacity	Drag the slider (0–100%) to control how visible the image is. Live preview shown.
Pass criteria message	Shown when learners meet the passing score.
Fail criteria message	Shown when learners do not pass.

Tip: Test your SCORM package in SCORM Cloud before uploading to production LMSs — it catches manifest issues early.

24. Help & Support

Purpose. An always-available help centre with quick links, workflow walk-throughs, and a searchable FAQ. Use it whenever you get stuck.

Help centre

<https://coursed.lovable.app/help>

Fields & Controls

Field / Control	Description
Quick Links	Direct routes to Dashboard, AI Generator, Blueprints, and Token Management.
Workflow Cards	Step-by-step walk-throughs of the most common tasks.
FAQ	Searchable answers to common questions.
Download Manual	Get this PDF straight from the Help page.

Tip: You can open the Help centre any time at <https://coursed.lovable.app/help>.
